Hiring Team, Veeva Systems

Your Commercial Content posting asks for someone who can turn a strategic marketing plan into the actual decks, case studies and launch materials a field team uses on a call. That is the work I did at Sensata: I owned positioning and messaging for a new sensing product line, writing the content that turned technical specs into a customer-facing value proposition, and conversion on priority launches went up 15% once that content shipped.

The enablement side of that content loop is where I spend most of my time. I built the sales decks and case studies that 50+ Sensata reps used in the field, and win rates rose 30% once everyone was pitching from the same story instead of five different versions of it. I ran the launch campaigns behind that content too, email and paid, which pushed qualified leads up 35% and taught me how the same message has to flex across a landing page, a rep's deck and a case study without losing the thread. At Pixis I kept enterprise case studies and sales materials current on an ongoing basis, the unglamorous part of commercial content that keeps a sales team's story from going stale.

I am also building PriceKeel, a decision-integrity layer for B2B SaaS deal pricing, which means I spend my own days now writing the content that gets RevOps and Finance to trust a number, an audience that reads for evidence the same way life sciences customers do. At Applied Materials I build the leadership decks and market-sizing content that go to Sales, Engineering and Accounts every week, and I use AI agents built on Claude to clear the repetitive research first so the writing time goes into the content that actually needs a human voice.

What I would bring to this role is a track record of content that survives contact with the field: written once, used everywhere from launch to enablement to customer marketing, with the numbers to show it moved a sales team. Proof trail at adhi-product.vercel.app/ref/veeva-systems.
