Hiring Team, Plaid

Your posting asks whoever takes this role to act as the quarterback for Plaid's onboarding strategy, and that is close to the exact job I already did on SwipeHire, an AI job-matching platform I built from a blank PRD. I owned the onboarding narrative and the analytics stack behind it (GA4, GTM, event tracking, funnel dashboards), ran 8+ A/B tests and 12+ user interviews, and activation for new users went up 25%. That is the loop an onboarding owner runs on repeat: narrative, instrumentation, test, revise.

The JD also wants someone who partners with Product to shape product-market fit and brings the voice of the customer into roadmap decisions, not someone who writes copy after Product has already decided. At Sensata I ran 30+ customer interviews with OEMs and distributors on a new sensing line, and those findings went straight into what Engineering built next, not into a slide deck nobody read. The same launch, positioning through pricing through channel, drove $2M+ in first-year revenue, and translating the technical spec into something a buyer would pay for is most of why it worked.

Turning a strategy into GTM programs that Sales, Enablement, Growth and Marketing can all run from is its own skill, separate from having the strategy in the first place. I built the sales enablement decks and case studies that came out of the Sensata launch for 50+ reps, and win rates went up 30% once everyone had one story instead of five. I'm also Strategic Marketing III at Applied Materials today, sizing markets with Sales and Engineering and automating the repetitive side of competitive analysis with AI agents built on Claude, the kind of workflow a lean onboarding team should be running too.

Plaid's network effect depends on the first ten minutes going well for whoever is connecting an account, and that first-mile problem is the one I have actually spent time solving rather than just talking about. Proof trail at adhi-product-ai.vercel.app/ref/plaid.
