Hiring Team, Meta

Your Competitive Intelligence team's core motion, pulling multiple imperfect third-party signals into one high-fidelity view leadership can act on, is the exact motion I run today at Sensata: I benchmarked 10+ competitors across multiple data sources to realign pricing, driving +8% market share, then built the FY2026 Bleeders and Leakers dashboard that pulled 1,200 pricing opportunities across 3 regions and 20 product lines into a single defensible view, surfacing $433M in margin gaps for leadership to prioritize.

The stakeholder-sourcing side of this role is also familiar ground. At Simon Vision Consulting, I led a 5-consultant team that interviewed stakeholders across 150+ target facilities and 10+ competitors to narrow a market of 170 facilities down to a credible SAM of 28, the kind of filtering a bigger, noisier number would have hidden. At Sensata's Product and Growth Marketing team, I ran 30+ interviews with OEMs and distributors that fed directly into a GTM plan driving $2M+ in first-year revenue.

The AI-powered-tools piece of this posting is where I'd bring something less common on a competitive-intelligence team: at Applied Materials I run AI agents built on Claude against repetitive market analysis, prompting and sequencing multi-step research tasks end to end rather than by hand. That is the proficiency this role is asking for, not a tool I would be picking up on the job.

I would welcome the chance to bring that same data-triangulation habit to how Meta reads its market. Proof trail at adhithyabhaskar.vercel.app/ref/meta.
