Hiring Team, Datadog

Your posting asks for someone who can own go-to-market strategy for a specific product line end to end, then turn that strategy into assets sales teams actually use. At Sensata I ran that full loop on a real product launch: positioning and messaging through a sales-enablement build for 50+ reps that lifted win rates 30%, on a sensing-product launch that drove \$2M+ in first-year revenue. That is the mechanic a product line like Incident Response needs repeated on every release, not a one-time campaign.

Every one of those launch assets was grounded in competitive work, not guesswork. I benchmarked 10+ competitors to sharpen positioning and pricing, then ran 30+ structured customer interviews with OEM and distributor engineers that fed directly into case studies and launch messaging, lifting CSAT 22% and conversion 15% on priority releases. That is the customer-marketing and competitive-insight discipline behind every strong battlecard and case study, and it is the part of this role I have already built from scratch once.

The products I launched were also genuinely technical: engineers evaluating sensor specifications and system reliability trade-offs before they would buy, not a consumer audience that takes positioning at face value. Translating that kind of engineering complexity into a story a sales team can sell is the habit I would bring to Incident Management, On-Call and Incident AI, not a generic marketing playbook applied to a new logo.

Right now, as Strategic Marketing III at Applied Materials, I partner directly with Sales and Engineering to size a fast-moving semiconductor market, and I automate the repetitive side of that analysis with Claude AI agents so the strategic work gets more of my time. I would bring a GTM operator who has already run the full launch-to-enablement cycle on a technical product, not someone building that muscle for the first time. Proof trail at adhi-product-ai.vercel.app/ref/datadog.
