Hiring Team, Google

The posting for Strategy and Operations Senior Associate asks for someone who can turn ambiguous, cross-functional problems into a strategy leadership can act on, then keep the operating cadence running once the plan is live. That is the job I already hold at Applied Materials: I pull input from Sales, Engineering and Accounts into one market view, then run the leadership decks, OKRs and weekly and quarterly business reviews that keep it moving instead of letting it sit in a deck nobody revisits.

At Sensata, I built the FY2026 Bleeders and Leakers Power BI dashboard, ranking 1,200 pricing opportunities across 3 regions and 20 product lines so leadership could act on \$433M in margin gaps instead of guessing where to focus. I carried that same discipline directly into AP26 revenue models and site-transition strategy with senior executives, and benchmarked 10+ competitors to turn a market read into a recommendation that drove +12% YoY revenue and +8% market share. None of that was a one-time analysis; each one needed a process and a cadence behind it to hold past the first quarter.

My opinion on this kind of work is that a cross-functional strategy only earns the name once it survives contact with the team that has to execute it, which is why I write my own SQL and Python against the underlying data instead of handing someone else's chart to a room and hoping it holds up. I also come at this from the revenue side Google Customer Solutions sells into: I carried P&L targets for an 8-client, \$15K-\$90K/month advertising portfolio at Pixis, running retail media and reporting straight to senior management, so the advertiser and agency side of this role is not new territory for me. I automate the recurring parts of my own analysis with AI agents built on Claude at Applied Materials today, and I want to bring that same bias toward a defensible model and a working operating cadence to GCS.
