

PITCH DECK | GOOGLE STRATEGY AND OPERATIONS SENIOR ASSOCIATE

GCS needs one person who can extract the insight, design the operating cadence, and keep every function aligned behind it. I already run that loop end to end, three jobs in a row.

Cross-functional strategy, executive stakeholder management and operating-cadence discipline from someone who builds the dashboard and runs the review, not just one or the other.

\$433M in margin gaps surfaced for leadership via a 1,200-opportunity Power BI system

+8% market share from a competitive-benchmarking recommendation turned into execution

AP26 revenue models and site-transition strategy run directly with senior executives

8-client, \$15K-\$90K/mo advertiser portfolio, the GCS customer side of this seat

Claude AI agents automating recurring strategy analysis at Applied Materials

This posting is really two disciplines held by one person: the analysis that finds the insight, and the operating cadence that makes it stick.

What losing that discipline runs into

A strategy function that only produces analysis does not fail loudly. It fails as a recommendation that got nodded through in one meeting, then quietly abandoned the next quarter because no cadence existed to check on it.

Sales, Finance, Product and Legal all touch the same cross-functional plan, so a gap in process design or stakeholder alignment becomes everyone's guessing game at the next review, not just one team's problem.

The fix is not another one-off deck. It is someone who treats insight generation, process design and stakeholder alignment as one connected discipline instead of three separate jobs.

What I have already run

At **Applied Materials**, I align Sales, Engineering and Accounts into one strategic view, then run the OKRs and weekly and quarterly business reviews that keep that view current instead of stale.

At **Sensata**, I built the Bleeders and Leakers dashboard that made 1,200 pricing opportunities actionable, then carried that same analysis into AP26 revenue models directly with senior executives.

Both mean I have sat on the insight-generation side and the stakeholder-alignment side of the same loop, not just one or the other.

A Strategy and Operations Senior Associate who extracts insights, designs operating cadences, develops cross-functional strategy and presents to leadership is describing this exact loop: find the signal, build the process, keep every function aligned behind it.

What the Strategy and Operations Senior Associate opening asks for, and where the proof already sits.

What the role covers

Extract actionable insights from business analyses and modeling.

Design processes and operating cadences.

Develop strategies addressing stakeholder needs across functions, and present data-driven recommendations to leadership.

Define implementation roadmaps and drive cross-functional alignment.

My Proof

Insight from modeling: built the FY2026 Bleeders and Leakers Power BI dashboard at Sensata, ranking 1,200 opportunities and surfacing \$433M in margin gaps for leadership to act on.

Operating cadences: run leadership decks, OKRs and weekly and quarterly business reviews at Applied Materials, the connective layer between technical teams and leadership, every job back to Plug Power.

Stakeholder strategy and leadership readouts: shaped AP26 revenue models and site-transition strategy directly with senior executives at Sensata; presented customer-research plans to the leadership team for approval at Plug Power.

Implementation roadmaps, cross-functional alignment: led a 5-consultant team from 170 facilities to a defensible SAM of 28 for Safran leadership, and align Sales, Engineering and Accounts into one view at Applied Materials today.

Bleeders and Leakers: make every opportunity visible before leadership sets the next target.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, with a pipeline funnel, regional scorecards and win-rate view checked before leadership set the next quarter's priorities.

\$433M

Margin Gaps Surfaced

Every gap traced to a specific record by salesperson and product line, the same segment-level detail a cross-functional strategy review needs to act instead of debate.

+8%

Market Share Gained

10+ competitors benchmarked, then turned into a recommendation that drove +12% YoY revenue alongside it, the insight-to-execution step this role owns.

53% to 61%

Distributor Margin Lift

Repriced the channel logic and documented it so the cadence held past the first quarter, not just the one review it was presented in.

That same instinct runs the Applied Materials seat today: align Sales, Engineering and Accounts into one view, then keep the OKRs and quarterly reviews current so the plan does not go stale after the first meeting.

What the first month inside GCS Sales and Strategy looks like.

WEEK 1

Map the stakeholders and the current cadence

Sit with Sales, Finance and the Strategy lead to learn how insights currently move from analysis to a decision, and shadow one existing operating review end to end before touching anything.

Why first: the same instinct that had me learn Applied Materials' Sales, Engineering and Accounts loop before building anything on top of it.

WEEK 2-3

Own one business analysis end to end

Take one open business question, build the model against the underlying data, and present a data-driven recommendation to leadership, the same loop that turned the Bleeders and Leakers analysis into a leadership decision at Sensata.

Why now: the fastest way to earn trust on an unfamiliar dataset is to ship one complete recommendation, not a slide of open questions.

WEEK 4

Stand up the operating cadence

Propose the recurring review that keeps that recommendation alive: who owns it, how often it gets checked, and what triggers a revisit, mirroring the weekly and quarterly reviews already running at Applied Materials and Sensata.

Why this fast: a cross-functional plan only earns its keep if a cadence exists to re-check it every cycle instead of trusting the first readout.

CLOSE

You are hiring someone to turn cross-functional ambiguity into one operating cadence leadership trusts. I have already built that discipline, from the analysis side and the alignment side.

The core proof is Sensata: a Power BI system tracking **1,200 pricing opportunities against a \$627M target**, \$433M in margin gaps surfaced for leadership, and a competitive-benchmarking recommendation that drove **+8% market share**.

What is harder to find is someone who has also sat on the GCS customer side of the business: I carried P&L targets for an **8-client, \$15K-\$90K/month advertising portfolio** at Pixis. The analysis, the cadence and the advertiser's view are not three separate skills I would need to learn on the job.
