Hiring Team, Plaid

Your posting asks for someone who can act as the operational backbone for a Product or GTM org, owning the operating rhythms that keep leadership honest. That is the job I already have at Applied Materials: I build the forecasting and market sizing models across multiple product groups, then run them through weekly and quarterly business reviews against OKRs, carrying P&L and revenue targets the whole way. I am not describing a framework I read about. I am describing Tuesday.

The dashboard half of the role is just as direct a match. At Sensata I built the FY2026 Bleeders and Leakers pipeline in Power BI: 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with win rate, stage distribution and regional scorecards clean enough for leadership to act on without double-checking the source. That dashboard surfaced $433M in margin gaps, and the cross-functional work that followed, AP26 revenue models, site transition strategy, multimillion-dollar customer quotes, ran directly with Finance, Sales and Engineering leadership. That is the same shape as "cross-functional projects spanning Product, GTM, Engineering, Finance, Legal and Partnerships" in your posting, just with different team names on the door.

On using AI as a default part of the job rather than an experiment: as Strategic Marketing III at Applied Materials I already automate repetitive analysis work with AI agents built on Claude, and as founder of PriceKeel I run the CRM, CPQ, forecast reviews and deal approvals for my own company from zero, including the audit trail Finance can review for every pricing and financial decision. Both of those are proof I can build a system once and then trust it, which is what a launchpad team like BizOps needs more than one more person who can only follow one.
