Hiring Team, Sierra

At Sensata I sat across the table from a distributor network and raised its margins from 53% to 61% in under two quarters, then went and did it again on live customer quotes until the Bleeders and Leakers program had recovered $700K plus against a $627M book. That is the muscle your posting is asking for: lead pricing strategy on a major opportunity from the first customer conversation through a signed, negotiated close, with a commercial model behind every number on the table.

Outcomes-based pricing only works if the model connects what you charge to what the customer actually gets, and someone in the room can defend that math under pressure. I built that connection for a multi-$100M industrial BU: a Power BI commercial model tracking 1,200 pricing opportunities across 3 regions and 20 product lines, surfacing $433M in margin gaps so leadership could prioritize where to push, then sitting with senior executives on the multimillion-dollar quotes and AP26 revenue models that followed from it. The scale is different from an AI agent deal with a Fortune 500 retailer or bank, but the discipline of turning a business case into a number a CFO will sign is the same one.

I am building the same discipline into a product now. PriceKeel is a decision-integrity layer for B2B SaaS deal pricing: I designed the guardrail engine that reads a live discount exception and recommends a fix learned from a company's own closed-won and closed-lost deals, and I sell that business case myself into RevOps, Sales leadership and Finance, against entrenched CPQ and deal-desk habits. Pitching a pricing change to people who did not ask for one is most of what this role will require, and it is most of what I do every week right now.

I also automate the repetitive side of pricing analysis with Claude AI agents in my current role at Applied Materials, which is less about the technology itself and more about being comfortable enough with how these systems reason to price them well. I would like to put the same judgment to work on Sierra's enterprise deals. Proof trail at adhi-pricing-ai.vercel.app/ref/sierra.
