Hiring Team, Snowflake

Fifty sales reps is the number I can point to: the enablement decks and case studies I built at Sensata are the ones reps picked up and used unchanged in the field, and win rates moved 30% because of it. Your posting asks for a product manager who can activate features with thousands of sales professionals at once. I have not done it at that scale, but I have done the part that actually determines whether it works: building the artifact a rep trusts enough to run with on day one.

The AI-native half of the role is not new territory for me either. I run AI agents built on Claude at Applied Materials that act on forecasting and market-sizing work instead of just summarizing it for someone else to act on, which is the same reports-to-acts shift your posting describes as the point of the Enterprise AI team. I built the same muscle outside work: SwipeHire is a customer-facing product with a generative layer on top (Python, OpenAI API), built zero-to-one from a PRD I wrote myself through an MVP that onboarded 50+ users.

On the data side, I do not define product requirements from a conference room. At Sensata I ran 30+ interviews with OEMs and distributors before committing engineering time to a bet, then instrumented SQL and GA4 to track usage across 50K+ connected devices so the roadmap kept adjusting after launch instead of stopping at it. That same discipline runs through the deal data: as Pricing Lead I configured the CRM, CPQ and deal-desk approvals for an Industrial BU and built the dashboard that turned 1,200 live pricing opportunities into a prioritized, data-ranked list for leadership instead of a gut call.

I would welcome 30 minutes to talk through how that combination, sales activation at scale, AI-agent fluency, and a data-first prioritization habit, maps onto owning an Enterprise AI feature end to end. Proof trail at adhi-product-ai.vercel.app/ref/snowflake.
