

PITCH DECK | MODAL REVENUE OPERATIONS MANAGER

Modal is hiring someone who has already built core GTM infrastructure, not someone who will build it for the first time on your pipeline.

Lead routing, CRM architecture and pipeline reporting, deal desk and capacity forecasting, built from zero once already.

PriceKeel - founder, built CRM architecture, CPQ and deal approvals from a blank slate

\$700K+ margin recovered in 2 quarters running deal desk on pricing and negotiation reviews

\$627M pipeline tracked, 1,200 opportunities, dashboard and leaderboard reporting by salesperson

53% to 61% distributor margin lift via territory and channel repricing

Claude AI agents - evaluates and builds new tooling to speed up deal and forecast review

Your posting asks one person to own revenue operations end to end, and says they should have built this infrastructure before.

What a first-time build runs into

At \$300M+ ARR and fivefold growth since September, a RevOps seat that is learning CRM architecture and lead routing for the first time is building the plane mid-flight. A routing rule shipped wrong sends a lead to the wrong rep for a week before anyone notices.

Lead routing, CRM architecture, pipeline reporting and commission administration are one connected system at a usage-based sales org. A gap in one shows up as bad data in the next, and a leaderboard built on dirty pipeline data misleads the reps it is meant to motivate.

The fix is not more process. It is someone who has already broken and rebuilt that system once, end to end, and knows where it breaks first.

What I have already built, end to end

At **PriceKeel**, I set up the company's CRM architecture, CPQ configuration and deal approvals from a blank slate, then ran forecast and pipeline reviews on top of it, evaluating legacy CPQ and deal-desk tooling along the way.

At **Sensata**, I built a Power BI reporting system tracking 1,200 opportunities against a \$627M target and ran deal desk on that pipeline, recovering \$700K+ in margin in 2 quarters.

Both mean the core GTM infrastructure your posting names is a system I have built, not one I am learning.

A Revenue Operations Manager who owns lead routing through deal close and commission administration for a high-growth, usage-based sales org is describing the exact system I built for PriceKeel and ran on top of at Sensata.

What the Revenue Operations Manager opening asks for, and where the proof sits.

What the role covers

- "Own the entire revenue operations function, from top-of-funnel lead routing through deal close and commission administration."*
- "Built core GTM infrastructure before: lead routing, CRM architecture, pipeline reporting, deal desk."*
- "Build and maintain dashboards, leaderboards, and pipeline reporting. Monitor deal progression and CRM hygiene."*

My Proof

- CRM architecture and GTM infrastructure:** set up PriceKeel's CRM architecture, CPQ configuration and deal approvals from zero, then ran forecast and pipeline reviews on top of it.
- Lead routing:** automated the WordPress and Pardot lead flow at Plug Power, cutting cost per lead 50%.
- Dashboards and pipeline reporting:** built the FY2026 Bleeders & Leakers Power BI dashboard tracking 1,200 opportunities across 3 regions, with win rate, avg \$/win and stage distribution by salesperson.
- Deal desk and CRM hygiene:** ran deal-by-deal review at the pricing and negotiation stage recovering \$700K+ in margin, and automated the Mar-Tech stack for closed-loop reporting at Plug Power.

Bleeders and Leakers: the pipeline-reporting and deal-desk system behind a \$700K recovery.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, with every deal traced to a salesperson and stage before leadership decided where to push next.

\$627M

Pipeline Tracked, 1,200 Deals

Pipeline funnel, win rate, avg \$/win and stage distribution built by salesperson and product line, the leaderboard layer this role maintains.

53% to 61%

Distributor Margin Lift

Repriced the channel and territory discount logic region by region, the territory-management strategy this seat runs.

\$700K+

Margin Recovered, 2 Quarters

Recovered deal by deal at the pricing and negotiation stage, the deal-desk review this role owns before close.

At PriceKeel that same instinct became the infrastructure itself: CRM architecture, CPQ configuration and deal approvals I built and now run, so a lead never has to guess which rep owns it.

What the first month owning Modal's revenue operations function looks like.

WEEK 1 Audit lead routing and CRM hygiene Sit with Sales and Finance to walk the current lead-routing rules, CRM architecture, lifecycle stages and custom properties end to end, flagging where data hygiene breaks down first. Why first: the same audit instinct that had me map PriceKeel's own CRM architecture before building deal approvals on top of it.	WEEK 2-3 Own a live deal-desk cycle Take ownership of deal progression monitoring and deal reviews at the pricing and negotiation stage for a live cohort, then build the first pipeline reporting dashboard for the team's existing leaderboards. Why now: the same deal-by-deal review discipline behind the Bleeders and Leakers recovery.	WEEK 4 Build the capacity forecast Stand up the first capacity forecasting model against territory and closed-won trends, the same forecasting-model discipline built across multiple product groups at Applied Materials. Why this fast: a forecast is only credible once someone has traced the pipeline data it depends on by hand.
--	--	---

CLOSE

You are hiring someone to own the whole revenue operations function. I have already built the infrastructure underneath it.

The core proof is Sensata: a Power BI system that tracked **1,200 opportunities against a \$627M target**, deal desk that recovered **\$700K+ in margin in 2 quarters**, and distributor margins lifted **from 53% to 61%** through territory-level repricing.

What is harder to find is someone who has also built the CRM architecture and lead-routing system from the other side of the desk. **I built that at PriceKeel**, so the core GTM infrastructure this role owns is not something I would need to learn on the job.
