Hiring Team, Plaid

Your posting frames Link conversion as the metric that carries direct revenue, and says that metric now has to hold up as AI companies start launching fintech products on top of it. I have spent the last few years doing exactly that kind of funnel work. Rebuilding Google Merchant Center and Meta catalog feeds at GenY Medium lifted a B2B e-commerce startup's conversion rate 36%. Running 15+ structured A/B tests at Plug Power cut CPA 25% while lifting conversion 20%. Different front door, same discipline: find where users drop, test a fix, ship it, measure again.

The roadmap ownership in your JD is also familiar ground. At Sensata I owned the product roadmap for sensor solutions across automotive and industrial segments, managed a 100+ feature backlog with engineering in Agile across 3 regions, and used that prioritization discipline to accelerate releases 25% and cut time-to-market 20%. I paired it with 30+ customer interviews that turned field pain points into tested hypotheses and raised CSAT 22%, so the roadmap never ran ahead of what users actually needed.

On the agentic piece specifically: I automate repetitive analysis work with AI agents built on Claude at Applied Materials, so I have an opinion on where a model should own a step and where a person still has to. I also shipped an AI product zero-to-one, SwipeHire, where I wrote the PRD, scoped the MVP, and ran 8+ A/B tests on the onboarding flow itself, lifting activation 25% for the first 50+ users. If AI agents are about to become a meaningful share of what walks through Link, that is the exact experimentation loop I would bring to the roadmap: instrument it, test it with real users, ship what moves the number.

I would welcome 15 minutes to talk through where this maps onto Link's roadmap. Proof trail at adhi-product-ai.vercel.app/ref/plaid.
