Hiring Team, EY

Two quarters into the Bleeders and Leakers program at Sensata, I had recovered \$700K in margin by building a Power BI dashboard that ranked 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, then handed account teams regional scorecards and win-rate tracking they could act on right away. That is the pattern your Global Pricing CoE Lead posting is describing: take one pricing program and turn it into a scalable, repeatable asset multiple regions can run on, not a one-off fix that only works once.

I built that dashboard as the standard other account teams in the Industrial BU ended up adopting, not as a side project. I raised distributor and channel-partner margins from 53% to 61% by rebuilding how parts sold through distribution were priced, drove +12% YoY revenue and +8% market share off competitive benchmarking against 10 or more players, and carried P&L and revenue targets the whole time. I also partnered with senior leaders on multimillion-dollar customer quotes and AP26 revenue models, so the pricing logic held up under real commercial pressure, not just in a slide deck.

The part of your posting that interests me most is the AI-enabled pricing ecosystem piece. I am building PriceKeel, a decision-integrity layer for B2B deal pricing that reads a live discount exception and recommends an explainable guardrail learned from a company's own closed-won and closed-lost deals, with an audit trail Finance can actually use. At Applied Materials I run a parallel version of that discipline today: value-based pricing for a fast-moving technical equipment market, forecasting where demand inflection points are headed, and automating the recurring financial modeling with Claude-based AI agents so more of the week goes to the pricing call itself.

What I would bring to this Lead role is the operator half of a pricing CoE: someone who has already built and scaled a regional pricing program inside one business, and who is now designing the tooling that makes that kind of pricing governance repeatable elsewhere. I would welcome the chance to talk through how that experience maps onto EY's pricing standards work.
