Hiring Team, Harvey

At Sensata I translated a connected-sensor integration into something an OEM buyer would actually sign off on: the positioning and joint-launch content I wrote lifted conversion 15% on priority releases. That is the core of what this role is asking for, taking the technical reality of an integration between two companies' platforms and turning it into one story both sales teams can sell.

The cross-functional half is familiar too. At Applied Materials I sit between Sales, Engineering and Accounts every week to keep one market view current, without owning any of those three functions directly. At Sensata I built the messaging frameworks, case studies and enablement content that took a 50-person rep team's win rate up 30%, after running 30+ interviews with OEM and distributor partners to find what was actually blocking adoption before I wrote a word of positioning. Running a joint go-to-market program across partners at different stages of maturity is the same problem at a different scale: find the real blocker on each side, then write the story that removes it for both.

Harvey builds on frontier agentic AI, and I build with it. I automate forecasting and market analysis with Claude agents at Applied Materials, and I shipped an AI product, SwipeHire, on the OpenAI API from a blank PRD to 50+ users. Writing integration collateral for partners building on an agentic platform is easier when you have actually shipped something on one.
