Hiring Team, Analog Devices

Your GMSL posting asks for someone who can drive go-to-market strategy and customer engagement for an automotive connectivity line, and that is close to the work I did at Sensata: I owned GTM for new automotive and industrial sensing products across North America and Europe, from positioning and pricing through channel launch plans, and drove $2M+ in first-year revenue. I also ran 30+ customer interviews directly with OEMs and distributors to find the pain points that shaped the roadmap, which is the same customer-facing muscle this role needs when explaining technical concepts and value to accounts.

The pricing and market-sizing half of the role is where I am spending this year. At Applied Materials I size the semiconductor market with Sales, Engineering and Accounts, then build the competitive, value-based pricing that keeps pace with a fast-moving market's inflection points. Before that, as Pricing Lead at Sensata, I drove +12% YoY revenue and +8% market share through price realignment built on benchmarking across 10+ key players, and negotiated multimillion-dollar customer quotes directly with senior executives.

Sales enablement and metrics reporting are the other two pieces your posting calls out. I built the enablement materials, decks and case studies that lifted win rates 30% for 50+ reps at Sensata, and the Power BI dashboards that turned competitive and market research into reporting leadership could act on. I also automate repetitive market and pricing analysis with AI agents built on Claude, so the reporting cadence runs on current data instead of a quarterly scramble.

GMSL's connectivity portfolio is exactly the kind of engineering-driven product line where I like to work: close enough to the technology to speak it with customers, commercial enough to own the pricing and launch calls. Proof trail at adhi-product.vercel.app/ref/analog-devices.
