Hiring Team, AHEAD

At Sensata I managed a 100+-feature backlog with Engineering in Agile across 3 regions, and the requirements in that backlog came straight from 30+ customer interviews with OEMs and distributors rather than from a wish list, which is how we cut time-to-market 20% without losing the user signal. That is the same discipline I would bring to the Product Manager role on Hatch and Unity: ship fast, but keep every requirement tied to a real problem someone actually has.

Your posting asks for someone who can own the full lifecycle end to end, turn validated feedback into requirements, and work with design on wireframes and prototypes before anything ships. I defined and executed the product roadmap for Sensata's sensor platforms end to end, from the customer interview through the backlog to the launch, and I ran that roadmap through the same cross-functional loop your posting describes: coordinating with Sales and Marketing on sales enablement and launch materials the way Hatch and Unity will need coordination with customer success, marketing, operations and finance. The GTM work I owned on new sensing products, positioning through launch, drove $2M+ in first-year revenue, so I know what it costs a launch when the requirements and the go-to-market plan aren't built together.

The AI piece matters to me too. At Applied Materials I build forecasting and market-sizing models and run AI agents built on Claude to take repetitive analysis off my plate, so I come at "explore how AI can improve the product experience" as something I already do inside my own workflow, not just a feature idea. I also shipped SwipeHire zero-to-one on my own time: wrote the PRD, turned early wireframes into an MVP with a UX-informed UI, and ran 8+ A/B tests and 12+ user interviews to get activation up 25%, so I've carried a product from a blank page through the same discovery-to-launch loop your team runs on Hatch and Unity.

IT asset intelligence is a product category where the roadmap has to balance what engineering can ship, what finance will fund, and what the client actually asked for, and that three-way judgment call is the part of the job I enjoy most. I'd welcome a conversation about where I could help the Hatch and Unity team. A fuller product trail, including SwipeHire's PRD and launch metrics, lives at adhi-product.vercel.app/ref/ahead alongside the Sensata roadmap work referenced above.
