Hiring Team, OpenAI

Your posting asks for someone who turns pricing and packaging decisions into business requirements that billing, quoting and revenue teams can actually build against. That is the system I built at PriceKeel: I set up the company's CRM, CPQ configuration and deal approvals from scratch, then built the audit trail that gives Finance line-by-line evidence for every pricing exception, the same operating backbone this role is asked to own from approval through launch.

I ran the same discipline at scale before founding it. At Sensata I led the Bleeders and Leakers program end to end, intake through sign-off, turning a messy discount and concession dataset into pricing guidance Sales acted on directly and recovering $700K+ in margin in two quarters. I built the FY2026 tracking dashboard that managed 1,200 pricing opportunities against a $627M target across 3 regions and 20 product lines, the kind of lightweight governance, documentation and issue tracking your posting calls out by name.

Pricing operations only works when Product, Engineering, Billing, Finance and GTM all trust the same requirement. I partnered directly with senior Sensata executives on AP26 revenue models and multimillion-dollar customer quotes, where a commercial proposal had to hold up against real systems and deal economics, not just a list price. I carry that same cross-functional habit today as Strategic Marketing III at Applied Materials, aligning Sales, Engineering and Accounts into one pricing and forecasting view and automating the recurring analysis with Claude AI agents.

I would welcome fifteen minutes to walk through how that maps onto your billing and launch-readiness work. A pricing decision is only as good as the system that carries it into production, and that is the part I enjoy owning. Proof trail at adhi-pricing-ai.vercel.app/ref/openai.
