Hiring Team, WorkOS

Your posting opens with taking campaigns and events from brief to live, and that is the exact motion I ran at Sensata: I took email and paid launch campaigns to an engineering and OEM buyer base from brief to live, generating +35% qualified leads, while building the SQL and GA4 tracking foundation underneath it so the team could see which cohorts were actually converting. Shipping the work and building the measurement under it at the same time is what this role is asking for.

The project-management side is not new either. At Pixis I hired and ran an 8-person team across 8 clients, coordinating creative, media and reporting timelines so nothing slipped and nothing got chased twice. At Plug Power I built the quarterly campaign plans and forecasts that went in front of leadership, then reported on 50+ inbound campaigns each cycle, tying SEM performance back to MQL quality and stage-1 pipeline. Keeping several moving programs honest on timeline, even on the pieces I was not personally executing, is a habit, not a one-off.

Writing for a technical, skeptical reader is where I spend real time: I turned sensor-product features into customer-facing copy and positioning at Sensata that lifted conversion 15% on priority launches. I also build AI-native habits into the job itself rather than talk about them. At Applied Materials I run AI agents built on Claude to automate the recurring analysis and reporting I used to do by hand, the kind of workflow that fits naturally with a company built around agent identity and authorization.

On my own time I built SwipeHire zero-to-one, Python and React, wrote the PRD, scoped the MVP and shipped it to 50+ early users, running 8+ A/B tests and 12+ user interviews that lifted activation 25% along the way. I like owning the whole surface of a program rather than one slice of it, which is why a role sitting at the center of your growth team's campaigns, events and content is the kind of range I want to build next. Proof trail at adhi-growth.vercel.app/ref/workos.
