Hiring Team, Housecall Pro

Housecall Pro's posting asks for someone who owns the free trial, onboarding and activation experience end to end, not someone who writes messaging around it after the fact. That is exactly what I built at SwipeHire: the onboarding flow for a zero-to-one AI job-matching product, then 8+ A/B tests and 12+ user interviews against it, which moved activation 25% for its first 50+ users. It is a smaller surface than Housecall Pro's trial funnel, but the habit this req is built around (ship a flow, test it, read the data, ship again) is the same one I run.

The cohort and research half of this role is where I already spend most of my week. At Sensata I built KPI frameworks in SQL and GA4 across 50K+ connected devices to find the high-intent cohorts and adoption signals that showed which customers were converging on activation and which were not, work that lifted feature adoption 18%. I also ran the new-and-early-churn interview loop the posting names directly: 30+ interviews with new customers and those showing early churn signals, which raised CSAT 22% by fixing the friction they actually named.

Day to day right now I run AI agents built on Claude at Applied Materials to automate the recurring analysis that used to eat a week, so the AI-tool fluency the posting asks for is not a box I am checking for the first time. I also defined and ran the product roadmap and a 100+ feature backlog with Engineering at Sensata, which is close to the how-and-when-a-new-feature-ships problem a platform-wide update runs into.

I would like to talk through how I would design the next onboarding or paywall experiment for new Pros. Proof trail at adhi-growth-ai.vercel.app/ref/housecall-pro.
