Hiring Team, AssemblyAI

At Plug Power I owned the entire paid budget line, $100K/month across Google Ads, Microsoft Ads, Meta and LinkedIn, and decided the channel split myself instead of sending it up a chain for someone else to call. Your posting describes that same ownership for the paid line item at AssemblyAI, across search, paid social and YouTube, and that is the part of the role I would walk in already doing.

Target-account work is really an attribution problem wearing a media plan, and that is where I have spent the most time. At Plug Power I closed the loop on Mar-Tech attribution across Salesforce, Adobe Analytics, GA and Google Tag Manager so every retargeting and reporting cycle ran on account-level data, not last-click guesses. At Pixis I ran eight accounts at once, each with its own budget ($15K-$90K/month), audience and channel mix, which is closer to running eight small ABM programs in parallel than one shared campaign. I would bring that same discipline to building person- and company-level audiences off your CRM data and keeping target accounts out of the mass campaigns Sales owns the first touch on.

Your buyers pick an API on benchmarks, not a slogan, and that changes what the ad has to say. At Sensata I rewrote technical sensing features into value propositions that OEM and distributor engineers would actually act on, lifting conversion 15% on priority launches, and I paired that with a Google Ads account I ran myself (bid strategy, conversion tracking, search-term management) rather than handed to an agency. I would run your Google Ads account, and the feature-led, proof-first copy a technical buyer expects, the same way.

I am also automating recurring reporting with Claude AI agents in my current role at Applied Materials, and would rather point that instinct at pacing budgets and flagging anomalies on your paid programs than keep it to myself. Proof trail at adhi-growth-ai.vercel.app/ref/assemblyai.
