Hiring Team, Retool

Your posting frames expansion, monetization and controls as one connected problem: usage is variable, the value of an agent depends on what it actually touches, and admins only let AI usage grow when they trust the limits around it. I have already built the smaller version of that exact system. PriceKeel, the company I founded, reads a live discount exception inside a deal platform and recommends a guardrail learned from a company's own closed-won and closed-lost history, the same value-metric judgment behind deciding what an enterprise should pay for variable AI usage.

The controls side is not an afterthought either. I built PriceKeel's audit trail myself so Finance has an explainable record behind every pricing exception, which is the same admin-trust problem your posting describes: budgets, limits and allocation that finance and platform owners can actually defend internally. I set up and still run the CRM and CPQ underneath it, so I am the one accountable when the system's logic has to hold up under a real customer's scrutiny, not just in a slide.

I also know what it is like to set a usage metric from nothing. SwipeHire, an AI job-matching platform I built zero to one, needed a pricing model before it had a single paying customer, so I benchmarked competitors and modeled three subscription tiers against willingness-to-pay signals. At Sensata, I recovered $700K plus in margin in two quarters by modeling unit economics deal by deal, then built the dashboard that tracked 1,200 of those pricing opportunities against a $627M target across three regions. That comfort with numbers carries over directly to reasoning about metering and spend predictability.

Retool's problem is bigger than any one of PriceKeel's parts, and that is exactly why the role is interesting to me: expansion, monetization and controls staying in one head instead of three. I would welcome fifteen minutes to walk through how the guardrail engine works and where the same logic maps onto AI usage billing. Proof trail at adhi-product-ai.vercel.app/ref/retool.
