Hiring Team, Trimble

Two quarters into the Bleeders and Leakers program at Sensata, I had repriced parts sold through distribution and raised distributor and channel-partner margins from 53% to 61%, executed directly inside the revenue systems Sales and Finance both relied on. That is the motion your Revenue Operations Manager posting describes: executing complex pricing structures within revenue systems, not redesigning them on a whiteboard and handing the result to someone else to run.

Running PriceKeel means I build and run the CRM and CPQ, forecast and pipeline reviews, and deal approvals myself, and I built the audit trail that gives Finance explainable evidence behind every discount call. A revenue system that Finance cannot audit is not really a revenue system, it is a spreadsheet with better formatting. That is the standard I hold systems work to, and it is the standard your req is asking for across setup, validation and pricing-structure execution.

The FY2026 Bleeders and Leakers dashboard I built at Sensata tracked 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, and it only mattered because the view was cut by salesperson and product line, not just by region. Order-to-revenue work across a product portfolio as wide as Trimble's will live or die on that same discipline: the system has to tell someone exactly where margin is leaking, not just that something is off. I also partnered with senior executives across Finance, Sales Ops and Product on Sensata's AP26 revenue models and the multimillion-dollar customer quotes those models fed, which is the same three-way handoff this role sits in the middle of.

Trimble's order-to-revenue lifecycle spans a wider set of products and systems than anything I have priced before, and that is exactly the kind of systems-execution problem I want to work on next: one where the fix has to hold up across platform upgrades, not just one pricing cycle.
