Hiring Team, TotalEnergies

Your CPPA Sales Operations Senior Manager posting asks for someone who can run a sales funnel in CRM, keep a valuation model current on every deal in it, and still be the person who can explain the number to an executive in one sentence. That is the job I already run at PriceKeel, where I own the CRM, the deal pipeline, and every approval step, with an audit trail Finance can actually check against.

The valuation and reporting half of the role is where I have the most to show. At Sensata I built the FY2026 Bleeders and Leakers model in SQL-fed Power BI: 1,200 opportunities tracked against a $627M target across 3 regions, surfacing $433M in margin gaps by salesperson and product line so leadership could act on them, and recovering $700K+ in margin in 2 quarters off the back of it. I also sat in the room for AP26 revenue models and multimillion-dollar customer quotes with senior Sensata executives, and repriced distribution to lift channel-partner margins from 53% to 61%, work that runs through the same kind of broker and advisor relationships a CPPA book depends on.

The renewable energy context is not new to me either. I spent a year inside the sector at Plug Power, a hydrogen fuel cell systems company, owning $100K/month budgets across multiple business units and building the forecasts I then had to defend to the leadership team before they signed off. I also hired and managed a team there and at Pixis, which is the same mentoring cadence I'd bring to training an associate pool on your CPPA funnel.

I came up through consulting-style project work before any of this (a pro-bono market-sizing and pricing engagement for Safran, run with a 5-person team), which is probably why I default to building the model first and the narrative to leadership second. That is the operator I would bring to the CPPA desk. Proof trail at adhithyabhaskar.vercel.app/ref/totalenergies.
