Hiring Team, DoorDash

When Sensata needed a go-to-market plan for a new line of sensing products across North America and Europe, I owned it end to end: positioning, pricing, channel and launch, closing the first year at \$2M+ in revenue. That is the same motion this role runs for Commerce Platform, define the growth strategy, work it through Product, Engineering, Sales and Account Management, and own the number at the end.

Merchant partnerships add a pricing layer on top of that, and I have run that combination before. At Sensata I ran the Bleeders and Leakers program, a cross-functional pricing review that routed exceptions through Finance and Sales sign-off across 1,200 opportunities, and used it to raise distributor and channel-partner margins from 53% to 61% in under two quarters. Partner economics are a relationship problem and a pricing problem at the same time, and I like working both sides of it.

The AI-tool piece is not new either. At Applied Materials I automate recurring market analysis with agents built on Claude instead of rebuilding the same spreadsheet every cycle, and outside of work I built SwipeHire, an AI job-matching platform, from a blank PRD to a shipped product with its own pricing model. I would bring that same habit, automate the repeatable part so the strategic part gets more of my time, to a seat this close to Commerce Platform's roadmap.

I would like to talk about where the growth strategy for Commerce Platform needs the most help right now. More of the work is at adhithyabhaskar.vercel.app/ref/doordash.
