Hiring Team, Lead Bank

A price-increase model does not work if you start from what last year's model said. At Sensata, I built our BU-wide Power BI price-increase model from raw margin data line by line, flagging the exact items where a single change could lift profitability more than 50%. That is the first-principles habit this role is asking for: work from the numbers in front of you, not the template that was there last time.

End-to-end ownership is not a phrase I have to reach for either. I ran the sensor product roadmap and a 100+ feature backlog at Sensata, in Agile with Engineering across 3 regions, and cut time-to-market 20% doing it. Before that, I shipped SwipeHire, an AI job-matching platform, zero to one: wrote the PRD, scoped the MVP, ran the GTM and analytics stack myself, and onboarded 50+ early users. Whether the team is a full product org or just me, I default to owning the thing start to finish.

Cross-functional influence at Sensata meant sitting with Finance and Sales leadership on multimillion-dollar AP26 revenue models and site transition strategy, not handing off an analysis and hoping it landed. At Applied Materials today, I build the forecasting and pricing models that Sales, Engineering and Accounts all work from, and I am automating the repetitive parts of that with Claude agents so the team spends its time on judgment calls instead of spreadsheets.

Fintech is a deliberate target for me right now, and a Banking as a Service platform is exactly the kind of infrastructure-level product I want to own next. More detail on the Sensata pricing model, the roadmap work and the SwipeHire build is at adhi-product-ai.vercel.app/ref/lead-bank if useful ahead of a conversation.
