Hiring Team, Intercom

Your posting for the Senior Sales Operations Manager asks for someone who can turn business requirements into scalable CRM and BI solutions, then run the operating cadence behind them. That is the exact system I built at Sensata: the FY2026 Bleeders and Leakers Power BI dashboard tracked 1,200 pricing opportunities against a \$627M target across 3 regions, with pipeline funnel, win rate, avg \$/win and stage distribution by salesperson and product line. It replaced a set of scattered spreadsheets that nobody trusted with one system Sales and Finance both signed off on, and it is the same funnel-health and conversion visibility your dashboard work asks for.

Visibility only matters if someone acts on it, so I did not stop at the report. I used that dashboard to recover \$700K+ in margin in two quarters and to lift distributor and channel-partner margins from 53% to 61%, which meant redesigning the deal structure itself and routing it through Finance and Sales sign-off before it shipped. That routing discipline, and the willingness to fix the bottleneck instead of just flagging it, is what I would bring to eliminating operational bottlenecks across your sales cycle.

I run the same loop today at PriceKeel, where I set up and operate the company's own CRM and CPQ, forecast and pipeline reviews, and deal approvals, and built the audit trail that gives Finance one consistent definition of a clean deal. That is the data governance instinct behind consistent metric definitions, applied by someone who has to live with the system they build rather than hand it off. At Applied Materials I have kept using AI tools day to day, automating recurring forecasting and reporting work with Claude agents so the analysis keeps pace with a fast-moving semiconductor market.

Fin's sales organization is scaling into a lot of moving parts at once. I would bring the same pattern that held at Sensata: build the dashboard that shows where a deal or a forecast is stalling, then fix the process behind it so it does not stall again.
