

PITCH DECK | INTERCOM SENIOR SALES OPERATIONS MANAGER

Fin's sales org is scaling fast enough that forecasting, pipeline and quota data start living in different systems. I have already built the dashboard and the audit trail that keep that from happening.

Sales operations, forecasting and CRM/BI systems built by someone who runs that exact stack today.

\$700K+ margin recovered in 2 quarters, Sensata Bleeders and Leakers program

1,200 pricing opportunities ranked against a \$627M target, 3 regions

53% to 61% distributor margin lift via deal structures that held

PriceKeel - founder running CRM, CPQ, forecast and pipeline reviews end to end

Claude AI agents automate recurring forecasting and reporting work today

The risk is not slower growth. It is forecasts and quota data that stop agreeing with each other.

What a fast-scaling sales org runs into

Forecasting, pipeline reporting, quota models and territory planning each start in their own spreadsheet or system, and a fix in one place quietly breaks the definition another team is using.

Without one dashboard for funnel health, conversion and revenue performance, capacity and compensation decisions get made on numbers that do not match by the time Finance checks them.

The fix is not another handoff meeting. It is a system that fixes the metric definitions once and a routing habit that keeps CRM and BI data in sync as the team grows.

What I have already run, at smaller scale

At **Sensata**, I built the Bleeders and Leakers Power BI dashboard: 1,200 pricing opportunities against a \$627M target, with one consistent definition of pipeline stage, win rate and margin across 3 regions.

I did not stop at the dashboard. I **redesigned the deal structures** underneath the worst gaps, which is why the 53% to 61% distributor margin lift held past the first quarter.

I run that same loop today at **PriceKeel**: CRM and CPQ, forecast and pipeline reviews, and an audit trail Finance can actually point to, because "eliminate the bottleneck" only works if someone owns the system after launch.

Forecasting and pipeline visibility, data governance and consistent metric definitions, and eliminating operational bottlenecks across the sales cycle are describing this exact loop: fix the definition once, build the dashboard on top of it, keep it from drifting as the org scales.

What the Senior Sales Operations Manager opening asks for, and where the proof sits.

What the role covers

- "Partner on forecasting, pipeline reporting, quota models, and performance insights."*
- "Develop dashboards providing visibility into funnel health, conversion, and revenue performance."*
- "Translate business requirements into scalable CRM and BI solutions. Establish data governance and consistent metric definitions."*

My Proof

- Bleeders and Leakers dashboard at Sensata:** built the system, surfaced \$433M in margin gaps, then closed \$700K+ of it in 2 quarters through negotiated fixes, not just a report.
- CRM, CPQ and forecast reviews at PriceKeel:** set up and run the company's own CRM and CPQ, forecast and pipeline reviews, and deal approvals end to end, and built the audit trail behind them.
- Applied Materials today:** build forecasting and market-sizing models across multiple product groups, turning field and technical input into one view leadership uses against P&L targets.
- AI tools as a habit, not a pilot:** automate recurring forecasting and reporting work with Claude AI agents, the same "use AI to reduce manual work" your posting calls out.

Bleeders and Leakers: one dashboard, one definition, a fix that held.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, win rate and stage distribution by salesperson and product line: the same funnel-health and conversion view a sales operations dashboard has to deliver.

\$433M

Margin Gaps Surfaced

The dashboard's job: rank every opportunity on one consistent metric so leadership could prioritize by salesperson and product line instead of chasing anecdotes.

\$700K+

Margin Recovered in 2 Quarters

Closed through negotiated fixes built on competitive gaps and documented customer willingness to pay, not a blanket policy change.

53% to 61%

Distributor Margin Lift

Redesigned the deal structure itself and routed it through Finance and Sales sign-off, so the gain outlived the first repricing pass.

The same BU carried P&L and revenue targets and ran multimillion-dollar customer quotes alongside senior executives, where pricing, Finance and Sales all had to agree on the same numbers before a deal moved. The common thread: one shared definition, then a fix that got measured after it shipped.

What the first month on Intercom's sales operations team looks like.

WEEK 1 Map where the data disagrees Pull forecasting, pipeline and quota reporting as they exist across Sales, Finance and Business Systems today, and trace where two teams are using the same term to mean different things. Sit with GTM leadership and Data Engineering to hear where that friction already shows up. ----- Why first: the disagreement is usually visible in the data before anyone names it. Same move that started the Bleeders and Leakers program.	WEEK 2-3 Ship the funnel-health view Build the dashboard tracking funnel health, conversion and revenue performance against one shared metric dictionary, and pressure-test it with Sales and Finance against the top territory and capacity questions before it goes live. ----- Why now: ranking against one real target, then verifying with the cross-functional group, is what made the 53% to 61% distributor gain stick.	WEEK 4 Standardize the governance Turn the Week 1 findings into a data governance standard: one set of metric definitions, a change-management path for CRM updates, and the start of a compensation and territory-planning cadence built on the same numbers. ----- Why this fast: a dashboard matters less if the definitions behind it stay ad hoc. Repeatability is the actual ask behind "data governance."
---	---	--

CLOSE

You are hiring someone to keep sales data trustworthy as the org scales. I have already built the dashboard and the governance habit that does exactly that.

The core proof is Sensata: **\$700K+ in margin recovered in 2 quarters**, distributor margins lifted **from 53% to 61%**, and a BU-wide dashboard that gave Sales, Finance and leadership one shared view of 1,200 opportunities against a \$627M target.

What is harder to find is someone who also runs that same stack today. I set up and operate **CRM, CPQ, forecast and pipeline reviews as founder of PriceKeel**, which means the systems-and-governance instinct behind this role is not something I would need to develop on the job.
