Hiring Team, Twilio

At Sensata I owned the roadmap and a 100+ feature backlog for a sensor product line shipped across 3 regions, coordinating engineering, sales and regional teams so releases moved 25% faster and time-to-market dropped 20%. That is the muscle a Journeys Coordination role is built on: keeping a fast-moving roadmap aligned across every team touching the product, not owning one channel in isolation.

I have spent most of my career building the connective tissue behind multi-channel customer touchpoints. At Plug Power I automated the Mar-Tech stack, Salesforce, Adobe Analytics, GA and Google Tag Manager, into one closed-loop system so email, paid and lifecycle teams worked off the same data. At Sensata I turned SQL and GA4 data from 50K+ connected devices into KPI frameworks that showed exactly where a customer's journey was breaking down before we shipped a fix, work that lifted CSAT 22% and feature adoption 18%. Coordinating a journeys product means every team building a touchpoint, email, paid, in-product, reads from the same source of truth, and that is the job I have been doing under different titles since Plug Power.

I also build with AI daily, not as a talking point. At Applied Materials I automate repetitive analysis with agents built on Claude, and before that I built SwipeHire, an AI job-matching platform, zero-to-one on Python, OpenAI's API and React: wrote the PRD, scoped the MVP and shipped it to 50+ early users off my own GTM and analytics stack. Coordinating a product like Journeys across engineering, GTM and support teams calls for exactly that combination, cross-functional roadmap ownership paired with AI-fluent execution.

I would welcome the chance to talk through how this maps to the Journeys Coordination role. Proof trail at [adhi-product-ai.vercel.app/ref/twilio](https://adhi-product-ai.vercel.app/ref/twilio).
