Hiring Team, Perplexity

Your posting asks for someone who owns both the data and the narrative behind a forecast, not just one or the other. At Sensata I built the Bleeders and Leakers Power BI system that tracked 1,200 opportunities across 3 regions, 4 product families and 20 product lines against a \$627M target, then traced \$433M in surfaced margin gaps down to \$700K+ actually recovered in two quarters. That is the same loop your posting describes for a pipeline review: the number on the slide has to survive someone asking where it came from.

I have also run the annual planning side of this, not just the weekly cadence. I shaped AP26 revenue models and multimillion-dollar customer quotes alongside Sensata's senior leadership, connecting site and channel decisions to the following year's targets the way your posting ties hiring plans to coverage. The distributor margin fix that took our channel from 53% to 61% held because I corrected the underlying pricing logic itself, not because I pushed through a one-time exception. That is the difference between a fix and a process, and it is the same distinction I read in your posting's emphasis on rules of engagement over ad hoc calls.

Right now I am also the person running CRM, CPQ, forecast reviews and deal approvals for my own company, PriceKeel, which means I am not asking you to take it on faith that I can pull my own data and build my own models. I do it daily, at a company small enough that a bad number in a forecast shows up within a day, not a quarter. At Applied Materials I automate the recurring parts of that analysis with AI agents built on Claude, the same instinct behind not waiting on analyst support to move a model forward.

What draws me to this specific opening is the scope: forecasting, territory and capacity modeling, and the full GTM operating cadence under one seat, reporting to the VP of Sales directly rather than through a layer of process. That is the shape of role where the \$433M-to-\$700K trace I ran at Sensata compounds instead of sitting in one dashboard. Proof trail at adhithyabhaskar.vercel.app/ref/perplexity.
