PITCH DECK | APPSFLYER GTM OPERATIONS SPECIALIST, NORTH AMERICA

# Deal desk and pipeline visibility are usually two different jobs. I have already built both as one system, with AI embedded in the workflow, not bolted on.

*CRM, CPQ, forecast reviews and deal approvals, built and run by one operator, measured on AppsFlyer's own stack as a customer.*

- **$700K+ margin** recovered in 2 quarters structuring non-standard deals at Sensata
- **CRM + CPQ + deal approvals** built and run end to end as founder of PriceKeel
- **AppsFlyer + Adjust** ran iOS app UA on your own measurement stack at Pixis
- **Claude AI agents** automate recurring revenue analysis at Applied Materials today

WHY THIS DECK EXISTS

# Most RevOps hires inherit a playbook. This req asks someone to rebuild how pipeline, deals and comp actually work.

### What makes that hard

Deal desk speed and margin protection usually fight each other: structure a deal fast enough for an AE to close it, without creating a precedent that erodes the next ten deals.

"AI embedded in the revenue motion" is a different ask than "AI as a side project." It means comp-exception workflows and pipeline-risk synthesis run through AI by default, not as a demo someone built once.

Pipeline and territory visibility tools only earn trust if they survive the first hard question a sales leader asks about why a region is underperforming.

### What I have already run, at smaller scale

At **Sensata**, I structured non-standard commercial deals under real margin pressure, recovering $700K+ in 2 quarters while raising channel-partner margins from 53% to 61%.

At **PriceKeel**, I built the CRM, CPQ, forecast and pipeline review process, and the deal-approval workflow, from nothing, plus the audit trail that lets Finance defend every call.

At **Applied Materials**, I automate recurring revenue and market analysis with Claude AI agents today, not as a pilot, as the operating default.

**A GTM Operations Specialist who sits at the center of commercial conversations, with a real seat at the table, is describing deal desk, pipeline visibility and AI-native workflow as one job. I have already run all three.**

THE REQ, MAPPED

# What the GTM Operations Specialist opening asks for, and where the proof sits.

## What the role covers

> *"You'll be the go-to for structuring non-standard deals, managing approval workflows... while protecting margin and maintaining compliance with pricing and contracting policies."*

> *"We want someone already using AI daily, whether that's AI-assisted account health briefs... synthesizing pipeline risk across hundreds of deals, or automating comp exception workflows."*

> *"You'll run regular pipeline reviews, identify gaps and risks, and build the visibility tools that help managers and leaders make better decisions faster."*

## My Proof

**Deal desk and margin protection, together:** $700K+ recovered in 2 quarters at Sensata by structuring non-standard commercial deals against competitive gaps and willingness to pay, not spreadsheet guesswork.

**AI embedded, not bolted on:** daily Claude-agent automation of recurring revenue analysis at Applied Materials, the exact habit this posting is screening for.

**Pipeline visibility that survives scrutiny:** built the FY2026 Power BI dashboard tracking 1,200 pricing opportunities against a $627M target, by region, salesperson and product line.

**Already your customer:** ran iOS app paid UA on AppsFlyer and Adjust at Pixis, so the measurement platform this role sits inside is a tool I have used, not one I would be learning.

THE PROOF, IN DEPTH

# One deal-desk operator, three systems: pipeline visibility, margin protection and deal infrastructure.

At Sensata, the Bleeders & Leakers program turned a $627M pricing target into something a sales leader could act on: a Power BI dashboard tracking 1,200 opportunities with win rate, average dollar-per-win and stage distribution, by salesperson and by product line, across 3 regions.

## $700K+

**Margin Recovered, 2 Quarters**

Structured non-standard commercial deals around competitive gaps and customer willingness to pay, not a blanket discount cut.

## 53% to 61%

**Channel Margin, Under 2 Quarters**

Repriced parts sold through distribution, the same margin-governance muscle a deal-desk role is built to use on every exception.

## 1,200 deals

**Tracked Against a $627M Target**

One dashboard, three regions, four product families, twenty product lines; pipeline funnel and stage distribution in one view.

As founder of PriceKeel, that same discipline became the product: a decision-integrity layer that runs CRM, CPQ, forecast reviews and deal approvals, with an audit trail Finance can actually use, selling directly against the legacy deal-desk tooling this role would otherwise inherit.

FIRST 30 DAYS

# What the first month inside AppsFlyer's GTM engine looks like.

WEEK 1

## Map the deal-desk and AI workflow

Sit with Sales, Finance and Customer Success to walk the current approval chain, pricing policy guardrails and the comp-exception and pipeline-risk workflows already running on AI, then find where they disagree.

**Why first:** the same CRM/CPQ-and-audit-trail mapping I ran building PriceKeel from nothing.

WEEK 2-3

## Ship one AI-embedded exception workflow

Take one recurring deal-desk exception, a discount tier or approval routing rule, and automate the first pass with AI so AEs get a fast, consistent answer instead of a queue.

**Why now:** the same instinct that turned repetitive market analysis into a standing Claude-agent workflow at Applied Materials.

WEEK 4

## Build the standing pipeline dashboard

Ship a Salesforce-sourced pipeline and territory view for sales leadership that surfaces win rate, stage risk and dollar-per-win by rep and region, so the next "why is this region underperforming" question has an answer before it's asked.

**Why this fast:** the same dashboard discipline that surfaced $433M in margin gaps for Sensata leadership to prioritize.

CLOSE

# You are hiring someone to make pipeline, deals and AI-embedded workflow one system. I have already built that system twice, and used your product as a customer.

The core proof is two-sided: **$700K+ in margin recovered** structuring non-standard deals at Sensata, and a **CRM, CPQ, forecast-review and deal-approval system built from scratch** as founder of PriceKeel, with an audit trail Finance can actually use.

What is harder to find is someone who has already used AppsFlyer's own measurement stack as a customer and already runs AI as the operating default, not the pilot. **Both of those are already true here**, so the ramp this role would otherwise budget for does not apply.
