Hiring Team, AppsFlyer

I don't normally open a cover letter with "I use your product," but it's true here: I ran iOS app paid user acquisition on AppsFlyer and Adjust at Pixis, across an 8-client, international portfolio. So when your posting asks for someone who is already AI-native and already fluent in the mechanics of a measurement platform, not someone ramping up on day one, that's a fair description of where I'm starting from.

The deal-desk core of this role, structuring non-standard deals and protecting margin while keeping deals moving, is what I ran as Pricing Lead at Sensata. I recovered $700K+ in margin in 2 quarters through the Bleeders & Leakers program, negotiating off competitive gaps and customer willingness to pay, and raised distributor and channel-partner margins from 53% to 61% in under two quarters. I also built the FY2026 Power BI dashboard that tracked 1,200 pricing opportunities against a $627M target with win rate, average dollar-per-win and stage distribution by salesperson, the same kind of pipeline visibility your sales leadership is asking RevOps to build.

As founder of PriceKeel, I'm not just adjacent to CRM and CPQ, I run them. I set up the company's CRM, CPQ, forecast and pipeline reviews, and deal approvals from scratch, and built the audit trail that gives Finance evidence behind every pricing call. At Applied Materials I automate recurring revenue analysis with Claude AI agents, the exact "where can AI do this faster" instinct your posting names directly rather than treating as a nice-to-have.

What I'd bring to AppsFlyer's GTM engine is someone who has already built the deal-desk and CRM/CPQ infrastructure this role owns, who runs AI-native by habit rather than by mandate, and who has used your own product as a customer, so I already know what "good" looks like from the other side of the dashboard. Proof trail at adhithyabhaskar.vercel.app/ref/appsflyer.
