Hiring Team, Ironclad

At Sensata I owned a buyer persona end to end: positioning, pricing, channel and launch for a new line of sensing products across North America and Europe, which drove $2M plus in first-year revenue. That is the general manager mindset your posting describes for the Legal persona, just with an OEM engineer in the buyer's chair instead of a GC: understand what they need, shape how the product serves them, and own the pipeline and revenue that prove it worked.

Positioning only earns its keep if it survives a sales call, so I rewrote the launch messaging until it turned technical specs into a value proposition a buyer would actually act on, which lifted conversion 15%. Then I built the enablement decks and case studies that got 50-plus reps using it, which raised win rates 30%, and ran 30-plus interviews with OEMs and distributors to find where deals actually stalled. That is the same motion as pulling a win-loss interview and a Salesforce pipeline view and turning both into a recommendation a seller can use tomorrow.

Narrative work does not stop at launch day. I ran competitor and customer analysis across EMEA and the US to find where buyer purchasing patterns and competitor market share were leaving revenue on the table, then carried that intelligence into a pricing role where it became a 12% revenue lift and an 8% market share gain. Owning a persona means the market view, the messaging, and the number on the board all have to trace back to the same story, and that is the discipline I would bring to Legal.

I am also automating repetitive analysis with Claude AI agents in my current role at Applied Materials, which has me thinking in the same terms Ironclad builds for its own customers: agents doing real work inside a process, not just running a script. I would like to put that same thinking, and the persona-ownership habit above, to work on the Legal segment. Proof trail at adhi-product-ai.vercel.app/ref/ironclad.
