Hiring Team, EarnIn

Your posting asks a question I already answer in my current job: "why isn't an agent doing this?" At Applied Materials, I automate the recurring part of my own forecasting and market-sizing work with AI agents built on Claude, so a refresh is a review, not a rebuild from scratch. That is the exact habit your Strategy and Operations seat is asking for, not a pilot I would need to stand up after I start.

I also know what it takes to turn a pilot into something the next team can run without starting over. At Sensata, I took the Bleeders and Leakers program from an ad-hoc negotiation habit to a repeatable process: a Power BI dashboard tracking 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines. That dashboard surfaced $433M in margin gaps for leadership to prioritize, and the program behind it recovered $700K+ in two quarters. The same shape of work, built once and reused, is what your posting describes as turning experiments into playbooks, templates and reference implementations.

The other half of the job is getting people who did not build the model to act on it. I shaped AP26 revenue models and site-transition strategy with senior executives at Sensata, building consensus before those numbers reached multimillion-dollar customer quotes, and I built the pitch decks and sales content that carried them. At Pixis, I hired and managed an 8-person team running an 8-client, $15K-$90K/month portfolio and cut client churn 50% through account playbooks built from scratch under pressure, the kind of small cross-functional team and account-operations work your B2B initiatives describe.

I would like to bring that combination, agentic workflows as a daily habit, a track record of turning a working pilot into a process other teams can run, and comfort building the business case that gets it funded, to EarnIn's B2B strategy work. Proof trail at adhithyabhaskar.vercel.app/ref/earnin.
