Hiring Team, Shrive Technologies

Your posting asks for someone who can turn subscription mechanics, standardized ARR reporting and complex contract terms into numbers Finance and Sales both trust. I built that discipline at Sensata leading the Bleeders and Leakers program: segmenting 1,200 pricing opportunities by region, product family and product line against a $627M target, flagging $433M in margin gaps, and recovering $700K plus in margin in two quarters. That is the same opportunity-by-opportunity reconciliation a subscription business runs to keep ARR numbers standardized and defensible.

CRM and CPQ ownership is not new to me either. At PriceKeel, the decision-integrity layer for B2B SaaS deal pricing I founded, I set up and run the company's CRM and CPQ, deal approvals, and forecast and pipeline reviews, and built the audit trail that gives Finance an evidence-backed record behind every quote change, discount exception and contract amendment. That is the record-keeping a prorations-and-renewals workflow needs when a deal upgrades, contracts or churns mid-cycle.

Churn is a number I have actually moved, not just modeled: I cut client churn 50% at Pixis through account strategy and vertical playbooks, and modeled three subscription pricing tiers from competitor benchmarks and willingness-to-pay signals on my own SwipeHire build. SQL and Excel, including the financial modeling I run pricing checks in, are tools I use every week at Sensata and PriceKeel to get from raw deal data to a number leadership can act on.

I would welcome the chance to bring that same discipline to Shrive Technologies' pricing desk. Proof trail at adhi-pricing-ai.vercel.app/ref/shrive-technologies.
