Hiring Team, Amphenol Communications Solutions

Your posting asks the Power Solutions Group PMM to coordinate pricing and market strategy with sales so the business defends and grows share at key accounts, not just hits a design-win number. I have run that loop already: at Sensata I led global pricing for a multi-$100M Industrial BU and pointed that pricing work straight at sales, raising revenue 12% YoY and market share 8% through competitive benchmarking against 10+ players, while also building the multimillion-dollar customer quotes that closed deals alongside senior executives.

The rest of the role reads like a job I have already done end to end. I owned the GTM for new sensing hardware at Sensata (positioning, pricing, channel, launch) through a network of OEM and distributor accounts, turning technical specs into the customer-facing story sales used to win designs, and fielded the customer requests that came back through Engineering, Quality and Customer Service, running 30+ interviews with OEM and distributor stakeholders that raised CSAT 22%. I ran the roadmap and backlog those conversations fed, across three regions.

I am now Strategic Marketing III at Applied Materials, sizing the semiconductor market with Sales and Engineering and building the forecasting models that keep pricing ahead of demand across multiple product groups, the same cross-functional work this role needs to close the gap between what a sales team sees at a key account and what the roadmap says is coming. I have also started running AI agents built on Claude on the repetitive side of that analysis, which frees up more of the week for the customer-facing part of the job.

That is the pricing-plus-GTM discipline I would bring to the Power Solutions design-win funnel: turn technical specs into positioning and quotes sales can act on, then keep the pricing current as account demand shifts. Proof trail at adhi-product.vercel.app/ref/amphenol.
