Hiring Team, VistaPrint

Your posting asks for someone who can integrate automated workflows and AI tools into pricing execution, not just run the numbers by hand, and that is the exact problem I built a company to solve. At PriceKeel I designed a guardrail engine that scores every discount exception against a company's own closed-won and closed-lost precedent, with an audit trail Finance can check on demand, replacing the manual review that slows most pricing teams down.

The margin-recovery side of this role is where I have the clearest track record. As Pricing Lead at Sensata I recovered $700K+ in margin in two quarters through the Bleeders and Leakers program, and raised distributor and channel-partner margins from 53% to 61% by repricing parts sold through distribution. I built the Power BI dashboard behind that work, 1,200 opportunities scored against a $627M target, surfacing $433M in margin gaps for leadership to prioritize, and a separate price-increase model flagging where a change could lift profitability more than 50%. That is the robust list-pricing and competitive-benchmarking framework your posting describes, already built and already proven.

Cross-functional partnership is the other half. I partnered with senior executives on multimillion-dollar customer quotes and site-transition revenue models at Sensata, and at Applied Materials today I build the bridge between Sales, Engineering and Accounts that promotional roadmaps need to actually ship. I also automate my own recurring pricing analysis with AI agents built on Claude, so working inside modern automation tools to scale pricing capability is already how I operate.

I would welcome the chance to talk through how I would architect NA's promotional calendar against real margin data. More of this work is at adhi-pricing-ai.vercel.app/ref/vistaprint.
