Hiring Team, Drata

PriceKeel started as one question: when a salesperson needs an exception on a B2B deal, who actually checks it, and how do they justify that call to Finance afterward. I built the guardrail engine and the audit trail that answers it, zero-to-one from a blank PRD, and I am running pilots on it now while raising the first round. That is the same shape of ambiguous, self-directed build your "0-1" line is asking for, not a hypothetical I'm pattern-matching to.

Most of my product reps live on sensing hardware, not SaaS, but the job underneath matches your req closely. I owned the roadmap and a 100+ feature backlog for Sensata's Enterprise OEM and distributor customers, prioritizing ruthlessly in Agile with Engineering, which shipped releases 25% faster and cut time-to-market 20%. I got there by running 30+ structured interviews with OEMs and distributors, not by guessing at what an Enterprise buyer wanted, and those interviews lifted CSAT 22%.

I also build my own Claude AI agents at Applied Materials to automate the repetitive side of forecasting, and I review every agent's output before it reaches a P&L-level call. Build the automation, then build the judgment layer on top of it: that's close to the agentic work you describe doing at the edge of AI and security, and it's the instinct I'd bring to deciding when an MVP has actually learned enough to move forward instead of just shipped on schedule.

I like that this role gets measured by whether the Enterprise problem got solved, not whether a ticket closed. Proof trail at adhi-product-ai.vercel.app/ref/drata.
