

PITCH DECK | AIRWALLEX MANAGER, PERFORMANCE MARKETING, PAID SOCIAL

Most B2B paid social programs report CTR and CVR. Very few tie a LinkedIn or Meta dollar all the way to a Salesforce opportunity. I already built that closed loop at \$100K/month scale.

Audience-to-CRM discipline, SQL-level segmentation, and a testing roadmap built to hit CAC and pipeline targets, not just funnel metrics.

\$100K/month - LinkedIn, Meta, Google and Microsoft Ads budgets owned end to end at Plug Power

CPA -25% / CPL -50% - from bid optimization plus a Salesforce-to-ad-platform closed loop

8 clients, \$15K-\$90K/month each - audience segmentation and churn -50% at Pixis

SQL + GA4 - KPI frameworks across 50K+ devices to find and target high-intent cohorts

AI agents on Claude - in production use today, Applied Materials

Scaling LinkedIn and Meta spend for SME and mid-market buyers is not a creative problem. It is a data-plumbing problem wearing a media-buying costume.

What that actually requires

Building audience frameworks from firmographic, behavioral and CRM signals, not just platform-native lookalikes, so spend reaches the SME and mid-market accounts that actually convert.

Keeping Salesforce and Marketo in the loop on every campaign, so a lead becomes a contact, an opportunity and eventually a dollar of pipeline the CRM can trace back to the ad.

Running pacing, bid strategy and budget allocation against CAC and ROI targets, with a testing roadmap across creative, bidding and audience that keeps improving the numbers instead of guessing.

What I have already built at that layer

Automated the **Salesforce, Adobe Analytics, GA and Google Tag Manager** stack at Plug Power for closed-loop attribution, tying LinkedIn and Meta spend to MQL quality and stage 1 pipeline instead of clicks.

Built **KPI frameworks in SQL and GA4** across 50K+ connected devices at Sensata to segment high-intent cohorts before a dollar of spend went against them.

Ran a **structured testing roadmap** across bidding, creative and audience at Plug Power (15+ A/B tests, 50+ campaigns) and at Pixis (full-funnel restructuring for 3x ROAS in one month).

The through-line: I do not just run LinkedIn and Meta campaigns. I have already built the CRM-to-ad-platform loop that makes SME and mid-market spend accountable to pipeline, which is the actual hard problem inside "paid social manager."

What the posting is asking for, and where the proof already sits.

What the role covers

- "Own end-to-end LinkedIn and Meta campaign strategy, build, and optimization across the funnel."*
- "Design and scale audience enrichment frameworks... leveraging firmographic, behavioral, and CRM-based signals."*
- "Manage pacing, bid strategies, and budget allocation to deliver performance within CAC and ROI targets."*
- "Query campaign and CRM data using SQL or data tools... to identify patterns and optimization opportunities."*

My proof

- Plug Power, \$100K/month:** owned LinkedIn, Meta, Google Ads and Microsoft Ads budgets end to end, building the pacing and forecast plans presented to leadership for approval.
- Sensata + Pixis:** built KPI frameworks in SQL/GA4 across 50K+ devices and used Amplitude/Tableau to build the audience segments behind a 40% ROAS lift, the same behavioral-signal work this posting calls audience enrichment.
- Plug Power, bid discipline:** bid optimization and creative testing cut CPA 25%, with keyword and audience tuning trimming wasted spend 15% against the same budget.
- Plug Power, CRM loop:** automated Salesforce, Adobe Analytics, GA and Google Tag Manager for closed-loop reporting, the SQL-to-CRM query work this role is asking for.

Plug Power: pacing, bid discipline and a CRM tie-back, not three separate jobs.

Built as the pacing, bid and CRM-attribution system behind paid social and paid search across multiple business units, not run as one flat budget line.

\$100K/mo

Paid Social & Search Budget Owned

LinkedIn, Meta, Google Ads and Microsoft Ads, planned and paced against leadership-approved forecasts.

25% / 50%

CPA Cut / Cost Per Lead Cut

From bid optimization plus an automated Salesforce-to-ad-platform closed loop, not manual reporting.

15+ / 50+

A/B Tests / Inbound Campaigns

A testing roadmap across creative, bidding and keyword strategy that also lifted organic visibility 35%.

The same audience-to-CRM instinct shows up at Pixis: I built the segments behind a 40% ROAS lift for 8 clients running \$15K-\$90K/month each, and cut churn 50% by watching account-level behavior, not just channel-level metrics.

What the first month owning Airwallex's paid social program would look like.

WEEK 1

Sit with the CRM before the ad accounts

Pull Salesforce pipeline-stage data first to see which SME and mid-market segments already convert, the same audience-first move that shaped the KPI frameworks at Sensata.

Why first: an audience framework built on platform data alone misses the segments Salesforce already knows convert.

WEEK 2-3

Wire the closed loop, then test against it

Stand up the same UTM, pixel and offline-conversion tracking that closed the loop at Plug Power, then run the first creative, bidding and audience tests against real MQL-to-SQL data instead of platform-reported conversions.

Why now: testing without a CRM tie-back optimizes for the wrong number.

WEEK 4

Turn the first pipeline read into the roadmap

Use what the first closed-loop numbers say about CAC and pipeline contribution to set the next quarter's testing roadmap across creative, bidding and audience, the same handoff that took Plug Power's early reads to a -25% CPA program.

Why this fast: a paid social program earns its next budget by showing the pipeline math, not the CTR.

CLOSE

Airwallex needs someone who treats LinkedIn and Meta spend as a CRM problem first and a media-buying problem second. I have already built that closed loop at \$100K/month scale.

The core proof is Plug Power together with the audience-segmentation work at Sensata and Pixis: a [Salesforce-to-ad-platform closed loop](#) that cut CPA 25% and cost per lead 50%, and the [SQL, GA4 and Amplitude discipline](#) that builds an audience from CRM and behavioral signal instead of a platform's default lookalike.

What's harder to find is someone who has run that loop at scale and can also read a market and forecast where it moves next, the market-sizing and forecasting work carried today at Applied Materials, so pacing decisions hold up past the current quarter.
