Hiring Team, Instawork

Your posting asks for someone who treats Claude, Cursor and ChatGPT as daily tools and has already shipped something with them, not someone who read about agentic workflows last quarter. At Applied Materials I built an AI-agent workflow on Claude that automates the recurring analysis behind our forecasting and market-sizing models, the kind of manual pull that used to eat half a day whenever a product group needed a fresh view. I ship the same way on my own time: SwipeHire, an AI job-matching platform built on the OpenAI API, went from a blank PRD to 50+ early users with me writing the matching logic, not assembling someone else's template.

I also run the operating loop a comp cycle depends on, just on the pricing side instead of compensation. As founder of PriceKeel, I own the CRM and CPQ, the forecast and pipeline reviews, and every deal approval myself, and I built the audit trail that gives Finance a documented reason behind each pricing call, the same evidence a crediting exception or a new-hire guarantee needs when Finance or Legal asks why it was made. Selling against legacy CPQ and deal-desk tooling means I spend most weeks thinking about how a quota, a territory or a guardrail actually gets set and defended, not just reported after the fact.

At Sensata I built the FY2026 Bleeders and Leakers Power BI dashboard that rolled 1,200 pipeline opportunities against a \$627M target up to leadership every week, by region, product line and salesperson, and used SQL-built KPI frameworks to find the \$433M in margin gaps that eventually became \$700K+ recovered in two quarters. I am comfortable directing SQL work rather than hand-writing every query when a faster tool reaches the same validated answer, which is the posture your posting describes for comp cycles and bookings forecasts.

I like the parts of revenue operations nobody wants to own: the cycle that has to run with zero errors, the dashboard leadership actually opens instead of skims. Proof trail at adhithyabhaskar.vercel.app/ref/instawork.
