Hiring Team, Retell AI

Your posting asks for someone who can structure and approve a non-standard deal in hours, not days, and who already runs a discount approval matrix with real pricing guardrails behind it. That is the product I built as founder of PriceKeel: a system that reads a live discount exception and recommends an explainable guardrail learned from a company's own closed-won and closed-lost deals, so the approval decision does not wait on a committee. I run that approval matrix on PriceKeel's own pipeline every day.

Modeling deal margin before an approval, not after, is the same discipline that recovered \$700K plus in margin in two quarters at Sensata through the Bleeders and Leakers program: deal-by-deal review built on competitive gaps and each customer's own willingness to pay. In the same stretch I rebuilt the discount approval structure on parts sold through distribution and moved those margins from 53% to 61%, numbers that held because the model ran before the deal closed, not after.

Quote-to-cash across CRM, CPQ, Legal and billing is also familiar ground. At PriceKeel I set up and run the company's own CRM and CPQ, forecast and pipeline reviews, and deal approvals end to end. At Sensata I partnered with senior executives on multimillion-dollar customer quotes through that same CRM and CPQ stack, with Legal and Finance both reading from the same record.

Weekly reporting on cycle time, discount levels and win rate is the part most deal desks bolt on later. I built it in from the start: the FY2026 Bleeders and Leakers Power BI dashboard tracked 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, with win rate, discount levels and cycle time all visible weekly, surfacing \$433M in margin gaps for leadership to act on. Proof trail at adhi-pricing-ai.vercel.app/ref/retell.
