

PITCH DECK | RETELL AI SENIOR DEAL DESK MANAGER

One seat here structures and approves a non-standard deal in hours, runs the discount approval matrix, models margin before every approval, and owns quote-to-cash across CRM, CPQ, Legal and billing. I have already run every piece of that loop.

A discount approval matrix built from scratch, margin modeling that runs before the deal closes, and a weekly cycle-time and win-rate report that leadership can act on.

\$700K+ margin recovered in 2 quarters by modeling margin before approval at Sensata

53% to 61% distributor margin lift from a rebuilt discount approval structure

Discount approval matrix + margin model, built and run daily as founder of PriceKeel

1,200 opportunities tracked weekly for win rate, discount levels and cycle time against a \$627M target

Deal desk for a voice-AI platform closing tens of millions of calls a month is three jobs held by one seat: speed on non-standard deals, margin discipline before approval, and a quote-to-cash record Legal and billing can both trust.

What slows a growing pipeline down

A non-standard deal that takes days instead of hours does not just delay one contract. It stacks behind the next deal, and the next, until Sales is waiting on Deal Desk instead of closing.

A discount approved without a margin model run first looks fine in the deal room and shows up as a margin problem the following quarter, once CRM, CPQ, Legal and billing have all already recorded it as final.

The fix is not a slower approval gate. It is a matrix that structures the decision before Sales asks, and a weekly report that shows cycle time, discount levels and win rate before they become a surprise.

What I have already run

At **PriceKeel**, I built the discount approval matrix and the margin model myself, so a non-standard deal gets structured and approved in hours, not days.

At **Sensata**, I modeled deal margin before every approval inside the Bleeders and Leakers program, then tracked win rate, discount levels and cycle time weekly across 1,200 opportunities.

Both mean I have built the approval matrix and run it against real deal volume, not just read about one.

Structuring and approving non-standard deals in hours, building the discount approval matrix and pricing guardrails, modeling margin before approval, running quote-to-cash across CRM, CPQ, Legal and billing, and reporting weekly on cycle time, discount levels and win rate: this is the exact loop I already run.

What the Senior Deal Desk Manager opening asks for, and where the proof already sits.

What the role covers

- Structure and approve non-standard deals in hours, not days.*
- Build discount approval matrix and pricing guardrails.*
- Model deal margin before approvals.*
- Manage quote-to-cash across CRM, CPQ, Legal, and billing systems.*
- Report weekly on cycle time, discount levels, and win rate.*

My Proof

- Non-standard deals, structured fast:** built and run PriceKeel's discount approval matrix daily, turning a discount exception into a structured decision in hours.
- Margin modeled before approval:** led the Bleeders and Leakers program at Sensata, modeling deal margin before sign-off and recovering \$700K+ in margin in 2 quarters.
- Quote-to-cash across CRM, CPQ, Legal, billing:** set up and run PriceKeel's own CRM and CPQ, forecast and pipeline reviews, and deal approvals; partnered with senior executives on multimillion-dollar customer quotes at Sensata through the same CRM and CPQ stack.
- Weekly cycle time, discount levels, win rate:** built the FY2026 Bleeders and Leakers Power BI dashboard tracking all three weekly across 1,200 pricing opportunities and a \$627M target.

Bleeders and Leakers: **model the margin before the deal closes, not after.**

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, with win rate, discount levels and cycle time all visible weekly before leadership set the next quarter's targets.

\$700K+

Margin Recovered, 2 Quarters

Deal margin modeled against competitive gaps and each customer's own willingness to pay before the approval, not after.

53% to 61%

Distributor Margin Lift

A rebuilt discount approval structure on parts sold through distribution, documented so the new margin held past the first quarter.

\$433M

Margin Gaps Surfaced

Every gap traced to a specific deal by salesperson and product line, the same record-level detail quote-to-cash depends on.

At PriceKeel that same instinct became the product: the discount approval matrix and the margin model are one system, so the approval decision and the record behind it are never two different stories.

What the first month owning Deal Desk at Retell AI looks like.

WEEK 1 Learn the current deal flow and its friction points Sit with Sales, Finance, Legal and billing to walk today's non-standard deal path end to end, and clock where it takes days instead of hours. Why first: the same instinct that had me learn a BU's own pricing patterns before building the Bleeders and Leakers model on top of them.	WEEK 2-3 Stand up the discount approval matrix and margin model Build the matrix and the margin model that structure a non-standard deal and model its margin before it ever reaches final approval, wired into the live CRM and CPQ. Why now: the same build I run daily at PriceKeel and the same discipline that recovered \$700K+ in margin at Sensata.	WEEK 4 Publish the first weekly cycle-time and win-rate report Ship the first weekly report on cycle time, discount levels and win rate so leadership sees the deal desk's output on a fixed cadence from month one. Why this fast: a discount approval matrix only earns its keep once Sales can see the numbers it is protecting.
---	--	--

CLOSE

You are hiring someone to keep non-standard deals fast, margin honest, and quote-to-cash clean across CRM, CPQ, Legal and billing. I have already built that discipline, from both sides of the approval.

The core proof is Sensata: a Power BI system tracking **1,200 pricing opportunities against a \$627M target**, distributor margins restructured **from 53% to 61%**, and \$700K+ in margin recovered in 2 quarters by modeling margin before every approval.

What is harder to find is someone who has also spent the last several months owning the discount approval matrix and the margin model for his own company's deal flow. **I built that at PriceKeel**, so the quote-to-cash discipline this role runs across CRM, CPQ, Legal and billing is not something I would need to learn on the job, only which deal to point it at first.
