Hiring Team, Baseten

At Sensata I built the multimillion-dollar customer quotes and deal models that carried a multi-\$100M pricing book, then turned that same technical-to-dollar translation into the sales enablement and onboarding materials that took a 50-person rep team's win rate up 30%. That is the core of the Solutions PMM role you're describing: turning "inference" and "self-hosted deployment" into a TCO story an enterprise buyer signs off on, then arming the reps who carry that story into the room.

The vertical-GTM piece is familiar too, not theoretical. At Simon I led a 5-consultant team that narrowed a TAM from 170 facilities to a SAM of 28 across four verticals, including healthcare and defense, and wrote separate positioning for each one instead of one generic pitch. Building distinct GTM kits for Financial Services and Health & Life Sciences is the same discipline at enterprise scale: one product, several buyer languages, each with its own objections and its own proof points. I also ran 30+ interviews with OEM and distributor buyers at Sensata, the kind of technical, risk-averse accounts that ask for a TCO number before they ask for a demo, and wrote the positioning that lifted conversion 15% on priority launches because of what those conversations surfaced.

I build with the tools your team is marketing to developers, not just around them. I hold all four Claude certifications and run AI agents built on Claude weekly at Applied Materials to automate forecasting and market analysis, and I shipped SwipeHire, a job-matching platform on the OpenAI API, from a blank PRD to 50+ users, including the competitor teardowns and pricing tiers that got it there. A buyer enablement program for an inference company lands better when the person writing the TCO guide has actually paid an API bill.
