Hiring Team, Metaview

Your posting is for a product marketing manager at an AI recruiting platform, and I already built one. SwipeHire is an AI job-matching platform I shipped zero-to-one (Python, OpenAI API, React): I wrote the PRD, scoped the MVP, and shipped auto-tailored resumes and candidate-to-role matching to 50+ early users on my own. I know what breaks when a hiring product's positioning does not match how a candidate or a recruiter actually reads a resume, because I have watched real users hit those edges.

The writing half of this role is where I would want to start. At Sensata I owned go-to-market for a new sensing product line and had to turn genuinely technical sensor capability into copy that OEM and distributor engineers would act on, not language that bounced off a technical reader. That positioning work lifted conversion 15% on priority launches, and the sales-enablement decks and case studies I wrote off the same research moved win rates 30% for 50+ reps. Writing for people who can tell when you are bluffing on the technical detail is the specific skill your posting is asking for, and it is the one I have built every launch around.

Market research is the other half. I ran 30+ interviews with OEM and distributor engineers at Sensata to find the language that actually closed deals, and I did the same thing solo at SwipeHire, running competitor teardowns and 12+ user interviews that shaped the pricing model and lifted activation 25%. High agency and low ego are easy words to put in a job posting; building a product by yourself until it works is what they actually mean, and that is the muscle I bring to a small, fast-moving team.

I would like to bring that same instinct to how Metaview positions itself to the people making hiring decisions. Proof trail at adhi-product-ai.vercel.app/ref/metaview. Happy to talk whenever works on your side.
