Hiring Team, Hex

Your posting is for Hex's first dedicated performance hire, with real budget and ownership of paid-attributed pipeline from day one. I have run that exact handoff before: at Plug Power I owned \$100K/month paid budgets across Google Ads, Microsoft Ads, Meta and LinkedIn, cutting CPA 25% through bid optimization and structured A/B testing, with no one else to hand the budget to.

What stands out in your listing is that the role is not just media buying, it is building the machine behind it: audience pipelines, creative testing frameworks, reporting infrastructure, bid management, wired into your own tools. I have already built that machine twice. At Plug Power I automated the WordPress and Pardot lead flow end to end and tied the full Mar-Tech stack (Salesforce, Adobe Analytics, GA, Google Tag Manager) into closed-loop reporting so every dollar mapped back to pipeline stage. At Pixis, I ran an 8-person team across 8 client accounts at \$15K-\$90K per client per month, with paid social, iOS app UA on Appsflyer and Adjust, and retail media all reporting into one P&L, delivering 3x ROAS in one month for a fashion brand and a 40% ROAS lift from Amplitude and Tableau-driven testing.

You also ask for specific examples of using AI tools to automate the work, not a line about being AI-curious. As Strategic Marketing III at Applied Materials, I automate recurring forecasting and reporting with agentic AI workflows built on Claude, carrying P&L and revenue targets on top of that automation. That is the same instinct your team is asking a performance hire to bring to Hex's own agentic platform: use the product to build and document the use case, not just report on it.

I would want fifteen minutes to walk through how I would stand up that first testing and reporting system for Hex's paid channels. Proof trail at adhi-growth-ai.vercel.app/ref/hex.
