

PITCH DECK | HEX GROWTH MARKETING MANAGER, PAID MARKETING

Hex is hiring its first dedicated performance hire. I have already built the paid-media machine this role needs, twice, at smaller scale.

Paid budget ownership, automated reporting infrastructure, and AI-tool fluency, held to one P&L at a time.

\$100K/month paid budgets owned end to end at Plug Power, CPA -25%

8 clients, \$15K-\$90K/mo each held to one P&L at Pixis

3x ROAS in one month via full-funnel testing

Mar-Tech automation tying spend to pipeline stage

Agentic AI workflows (Claude) automating recurring reporting today

A first performance hire cannot just run ads. They have to build the system that makes the ads accountable.

What a first-hire mandate runs into

With no existing paid function, the first 90 days are not about one good campaign. They are about a reporting and testing infrastructure that holds up once budget scales into seven figures.

Without audience pipelines, a creative-testing cadence and bid-management rules built into the stack from day one, every new channel added becomes a one-off instead of a repeatable system.

The fix is not more spend. It is treating paid media as an engineering problem: pipelines, dashboards and bid rules that keep working after the person who built them moves to the next channel.

What I have already built, at smaller scale

At **Plug Power**, I owned \$100K/month paid budgets across Google, Microsoft, Meta and LinkedIn alone, and built the automated reporting (WordPress, Pardot, Salesforce, Adobe Analytics, GTM) that made every dollar traceable to pipeline stage.

At **Pixis**, I ran paid social, mobile UA and retail media as one P&L for an 8-client, 8-person-team portfolio, with a standing testing cadence behind the 3x ROAS result.

At **Applied Materials**, I automate recurring reporting today with agentic AI workflows built on Claude, the same AI-tool fluency a first paid hire needs to document from day one.

A first dedicated performance hire with real budget from day one is being asked to build the machine, not just buy the media. That is the exact gap between a channel operator and someone who has already owned the budget, the reporting and the testing loop alone.

What the Growth Marketing Manager opening asks for, and where the proof sits.

What the role covers

- "Own paid media end-to-end: drive paid strategy and execution across Google Ads, LinkedIn Ads, and Meta Ads... manage and optimize 7-8 figure annual paid budgets."*
- "Build the machine: build automated performance marketing systems (audience pipelines, creative testing frameworks, reporting infrastructure, bid management)."*
- "Demonstrated use of AI tools, Claude, ChatGPT, Cursor or similar, to meaningfully automate or accelerate your work. We want specific examples."*

My Proof

- Paid media, owned end to end:** directed Paid Search and Paid Social across Google Ads, Microsoft Ads, Meta and LinkedIn alone at Plug Power, with no one else to hand the budget to.
- The machine, already built:** automated the WordPress and Pardot lead flow and the full Mar-Tech stack for closed-loop reporting, the same reporting-infrastructure and bid-management instinct this role names.
- AI tools, with a specific example:** automate recurring forecasting and reporting with agentic AI workflows built on Claude at Applied Materials today, not a claim of AI-curiosity.
- Testing discipline:** 15+ A/B variants at Plug Power and a 40% ROAS lift from Amplitude/Tableau-driven testing across 30+ campaigns at Pixis.

One P&L, every channel: **paid media and the infrastructure behind it, held to one target.**

At Plug Power I owned \$100K/month paid budgets across multiple business units with no dedicated paid team to lean on, which meant building both the media plan and the reporting infrastructure behind it from scratch.

-25% CPA

Google, Microsoft, Meta, LinkedIn

Bid optimization and structured A/B testing across 15+ variants, tied directly to MQL quality, not just click volume.

-50% CPL

Automated Lead-Flow System

Automated the WordPress and Pardot handoff end to end, one of several systems built behind the budget, not bought off the shelf.

3x ROAS

In One Month, Pixis Fashion Client

Full-funnel restructuring: shopping feed cleanup, smart bidding and creative refresh run as one motion, inside an 8-client, \$15K-\$90K/mo portfolio.

That same instinct runs on the reporting side today: automating recurring forecasting and analysis with agentic AI workflows built on Claude as Strategic Marketing III at Applied Materials, the exact AI-tool example this posting asks a candidate to name.

What the first month as Hex's first dedicated performance hire looks like.

WEEK 1 Map the current paid mix and funnel Sit with Brand Design and the PLG/self-serve funnel owners to walk current Google, LinkedIn and Meta spend against paid-attributed S1s, and flag where attribution gaps sit before touching budget. Why first: the same budget-and-reporting map I built before scaling spend at Plug Power.	WEEK 2-3 Ship the first automated system Build one piece of the machine end to end, a creative-testing framework or a reporting dashboard wired into Hex's own tools, using Hex's agentic features to document the use case as it ships. Why now: the same build-the-system habit behind the Plug Power lead-flow automation and Pixis testing cadence.	WEEK 4 Run the first cross-channel test Launch a structured audience or creative test across two paid channels in parallel, with Brand Design on creative and a shared dashboard Product Marketing can read the same way. Why this fast: a testing agenda only compounds if it starts in month one, not after the budget is already spent.
--	--	---

CLOSE

You are hiring someone to build the paid-media machine, not just buy the media. I have already built it twice, alone.

The core proof is two budgets run without a dedicated team to lean on: [\\$100K/month at Plug Power](#) (CPA -25%, CPL -50% via automated lead flow) and an [8-client, \\$15K-\\$90K/mo portfolio at Pixis](#) (3x ROAS in one month, 40% ROAS lift from structured testing).

What is harder to find is someone who already automates the reporting behind that budget with the exact AI tools this posting names. [Agentic AI workflows built on Claude are already my day-to-day habit](#), not a line I would need to learn on the job.
