Hiring Team, SEON

A competitive program in fraud prevention and AML compliance is only as good as the loop it closes: intel that never reaches a rep on a call is trivia. At Sensata I benchmarked 10+ competitors' pricing and positioning, turned that into a repricing play that drove +12% YoY revenue and +8% market share, then built the sales enablement, decks and case studies that 50+ reps used to lift win rates 30%. That is the strategy-to-battlecard-to-deal loop your posting describes, and it is the one I have actually run.

The knowledge-management side matters just as much as the research itself. I built the FY2026 Bleeders and Leakers Power BI dashboard at Sensata, a centralized base of 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, that surfaced \$433M in margin gaps for leadership to prioritize by salesperson and product line. Before that, as a Product Marketing Intern, I tore down our top three competitors' products and promotions and packaged that research into dashboards distribution teams actually used. Centralizing scattered intel so it is usable by whoever needs it next is a habit, not a one-off project for me.

I also bring the technical side your posting asks for. At Applied Materials I evaluate competitive pricing architecture and size the semiconductor market alongside Sales, Engineering and Accounts, translating technical documentation into one shared view instead of five conflicting ones, and I run that research with Claude AI agents now, which means more time on judgment calls and less on assembling the spreadsheet. The Safran market-sizing project I led in grad school runs on the same instinct your compliance and fraud-prevention market demands: 150+ facilities and 10+ competitors torn down fast enough to brief leadership on a real go-to-market call.

One instinct I would bring to this seat specifically: a battlecard is only useful if it tells a rep which competitor claim to challenge in the room, not just what the competitor says about itself. The Bleeders and Leakers dashboard mattered because it told leadership which \$433M of the gap to chase first, not just where the gap was. I would want SEON's CI program to give reps that same edge on every head-to-head call. Proof trail at adhithyabhaskar.vercel.app/ref/seon.
