Hiring Team, Waymo

Your posting asks for someone who turns operational pain points into a roadmap, and that is the job I already do. At Sensata I owned the sensor-product roadmap and a 100+ feature backlog across 3 regions, working directly with engineering in Agile to ship features that cut time-to-market 20% and accelerated releases 25%.

I get to that roadmap by listening first. I ran 30+ interviews with OEMs and distributors, then built SQL and GA4 KPI frameworks across 50K+ connected devices to find the adoption signals worth acting on, work that lifted CSAT 22% and feature adoption 18%. Right now, as Strategic Marketing III at Applied Materials, I automate the same kind of repetitive analysis with AI agents built on Claude, so more of my week goes to decisions and less to pulling numbers.

I also know what it takes to build a roadmap from nothing. SwipeHire is an AI job-matching platform I shipped zero to one on the OpenAI API: I wrote the PRD, scoped the MVP, and onboarded 50+ early users while owning the analytics stack that told me what to build next. That same operations-automation instinct shows up earlier in my career too. At Plug Power I connected a disconnected Mar-Tech stack (Salesforce, Adobe Analytics, GA, Google Tag Manager) into one closed-loop reporting system, the kind of large-scale operational efficiency your posting calls out.

I would like to bring that same roadmap-to-shipped-feature discipline to the fleet management tools team. Proof trail at adhi-product-ai.vercel.app/ref/waymo.
