Hiring Team, Gap Inc.

Your posting for Manager, Pricing Enablement asks for someone who turns an approved pricing or markdown decision into a process a whole organization can run on, not a one-off spreadsheet. I built exactly that at Sensata: the Bleeders and Leakers Power BI dashboard that turned 1,200 scattered pricing opportunities into one scored, repeatable workflow across 3 regions and 20 product lines, recovering $700K plus in margin in two quarters and lifting distributor margins from 53% to 61% in the same stretch.

That program is the enablement half of pricing, not just the strategy half. I owned the calendar and the exception process, trained the team that ran it, and kept it aligned across Sales, Finance and Operations so a pricing decision shipped the same way every time instead of depending on who was in the room. Your price-testing agenda and markdown-process ownership read like the same discipline, applied to promotions and markdowns instead of distributor contracts.

I also know the customer side of a pricing decision has to hold up, not just the backend math. At Sensata I ran willingness-to-pay research directly with OEMs and distributors before a price change shipped, and at Pixis I carried P&L targets across eight retail and D2C client accounts, so a markdown or promotion decision was never just a number on a dashboard to me, it was something a shopper had to make sense of at the register.

The tooling and dashboard-building you describe is also where I spend my current week. As Strategic Marketing III at Applied Materials I build forecasting and pricing models across product groups, and I automate the recurring analysis with AI agents built on Claude, checking every output before it moves forward, the same agentic-tool-with-a-human-check posture your posting asks for.
