PITCH DECK | GAP INC. MANAGER, PRICING ENABLEMENT (ATHLETA)

A pricing-enablement seat needs a dashboard and a repeatable process more than it needs another strategy deck. I have already built both, and they recovered real margin.

Pricing-process ownership, exception resolution, tool and dashboard build-out, and cross-functional rollout, proven on a $627M book at Sensata.

- **$700K+** in margin recovered in 2 quarters through a repeatable pricing process
- **1,200 opportunities, one dashboard** replacing scattered, ad hoc pricing review
- **53% to 61%** margin lift rolled out and trained across a distributor channel
- **Claude AI agents** run today with a human check before every output ships

WHY THIS DECK EXISTS

Pricing enablement is not a title, it is a maintenance job. The dashboard and the calendar have to survive after the strategy meeting ends.

What a pricing-enablement seat runs into

A markdown or promotion decision is easy to approve once. It is hard to make the SAME way every week, across Merchandising, Planning, Store Operations and Visual Merchandising, without a process and a calendar behind it.

Exceptions pile up faster than anyone can review them by hand, and without a scored system, the biggest margin leaks hide behind the smallest-looking line items.

A price-testing agenda only works if someone owns turning test results into an actual pricing action, not just a readout.

What I have already built, at comparable scale

At **Sensata**, I built the Bleeders & Leakers Power BI dashboard that scored 1,200 pricing opportunities against a $627M target, so every exception had a rank, not a guess.

I rolled that process out through distribution partners and trained the team on it, lifting margins 53% to 61%, not a one-time win.

At **PriceKeel**, I build guardrail logic that resolves a pricing exception against the company's own closed-won and closed-lost history, the same root-cause discipline a markdown-exception queue needs.

This req asks for pricing-process and calendar ownership, exception and root-cause resolution, a price-testing agenda, cross-functional coordination, and tool and dashboard build-out. That is the exact loop above, run at a $627M scale.

THE REQ, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"Manage pricing processes, calendars and execution for promotions and markdowns; resolve exceptions and root causes."*

> *"Own the price-testing agenda, from identifying opportunities to running tests and turning results into action."*

> *"Coordinate with Merchandising, Planning, Store Operations and Visual Merchandising; build tools and dashboards; support adoption through training."*

My Proof

Bleeders and Leakers at Sensata: a BU-wide process and calendar for 1,200 pricing exceptions against a $627M target, scored by root cause, not reviewed ad hoc.

53% to 61% distributor margins: a pricing process rolled out and trained across a channel, not just approved once in a meeting.

$700K+ margin recovered in 2 quarters: exceptions resolved against documented competitive gaps and customer willingness-to-pay data.

AI agents with a human check: runs Claude agents on recurring pricing analysis today, validating every output before it ships.

THE SENSATA PROOF, IN DEPTH

Bleeders and Leakers: a pricing-enablement system built once, run every week.

A BU-wide Power BI dashboard covering 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, win rate, avg $/win and stage distribution scored by salesperson and product line, not left to individual judgment.

$433M

Margin Gaps Surfaced

Every pricing exception ranked by root cause instead of chasing anecdotes line by line.

$700K+

Margin Recovered in 2 Quarters

Closed through a repeatable resolution process, not a one-off negotiation.

53% to 61%

Distributor Margin Lift

Rolled out and trained across a channel so the gain held after the rollout ended.

The same seat carried multimillion-dollar customer quotes and AP26 revenue models alongside senior executives. The common thread across every case: a process that outlived the meeting where it was approved.

FIRST 30 DAYS

What the first month owning Athleta's pricing process and calendar looks like.

WEEK 1

Map the markdown calendar and exception queue

Sit with Merchandising, Planning and Store Operations to build one view of the current promo and markdown calendar and where exceptions pile up, the same first move that built the Bleeders and Leakers dashboard at Sensata.

Why first: a pricing process only holds if the people running it agree on one shared calendar.

WEEK 2-3

Score the first exception backlog by root cause

Pressure-test 2 to 3 live markdown or promotion exceptions with Visual Merchandising and tech partners, and draft the first price-testing agenda item ready to run.

Why now: scoring by root cause, not reviewing case by case, is what made the 53% to 61% distributor gain hold at Sensata.

WEEK 4

Ship the first tool and training rollout

Automate one recurring piece of the pricing-exception workflow, and run the first training session so the process keeps running without me in the room.

Why this fast: the same habit that keeps Claude agents running recurring pricing analysis at Applied Materials today, checked before every output ships.

CLOSE

You are hiring someone to make a pricing process survive contact with a real organization. I have already run that process at a $627M scale and trained a channel on it.

The core proof is Sensata: **$700K+ recovered in 2 quarters** and a **53% to 61% distributor margin lift**, both run through a pricing-enablement system built once and run every week against a $627M-opportunity Power BI pipeline.

What carries over directly is the habit of building the tool first: at **PriceKeel** I build the guardrail logic that resolves a pricing exception by root cause, and at **Applied Materials** I run Claude AI agents on recurring pricing analysis today, with a human check before every output moves forward.
