Hiring Team, Agora

Agora's posting asks for someone who can turn a complex product into a story that holds up across Sales, Solutions Architects and a technical buyer, and that is the job I ran at Sensata: own positioning and launch end to end for an engineering-heavy product, not just write about one. I built the go-to-market plan for a new sensing-product line across North America and Europe (positioning, pricing, channel, launch), turned the engineering specs into messaging OEM buyers acted on, and drove $2M+ in first-year revenue with a 15% lift in conversion on the launches I owned.

The part of this role I find most interesting is the one most postings skip: you are not selling one product, you are selling RTC and Conversational AI as a single platform story to a buyer who may have only asked about one of them. I ran a close version of that problem at Sensata, where price-realignment work and win/loss patterns across 10+ competitors kept showing the same thing: reps lose deals when the story branches instead of staying on one thread. I would rather fix the one-thread problem for Agora than write another standalone launch deck.

My day job right now is partnering with Sales, Engineering and Accounts at Applied Materials to size and price a fast-moving semiconductor market, and running AI agents built on Claude so the recurring competitive analysis does not eat the week. I am also building PriceKeel, a decision-integrity layer for B2B SaaS deal pricing, so I am used to explaining a technical product to a skeptical buyer inside my own sales process, not just someone else's.

I would welcome the chance to talk through how I would approach positioning for the RTC and Conversational AI portfolio and the sales enablement that goes with it. Proof trail at adhi-product-ai.vercel.app/ref/agora.
