Hiring Team, DoorDash

Your posting asks for someone to design the incentive and budget structures behind Influencer & Affiliate and SMS, not just launch them, because the wrong split rewards the wrong behavior fast. I have built that exact tradeoff before: at Sensata I redesigned channel-partner incentive structures, raising distributor margins from 53% to 61% while still driving +12% YoY revenue through competitive-benchmarked realignment. That is the same balance a new-channels portfolio needs, paying enough to make creators show up without bleeding out on efficiency.

Before the incentive math, there is the test-and-scale part, and I have run it under the same imperfect-attribution conditions this role expects. At Pixis, I diversified an 8-client D2C portfolio into new channels, retail media (Amazon Ads, Criteo) and iOS app UA (Appsflyer, Adjust), cutting churn 50% while carrying P&L for the accounts running them. At Plug Power, I built the closed-loop Salesforce, Adobe Analytics and Google Tag Manager stack myself so a channel bet could be judged on real signal instead of guesswork, cutting CPA 25% under budgets I owned end to end.

The other half of this seat is being the cross-functional glue, which is where I have spent most of my time. At Sensata I ran 30+ structured interviews with OEMs and distributors, checked what I heard against SQL and GA4 usage data before trusting it, and turned that into fixes that lifted CSAT 22% and qualified leads 35%, all while keeping Product, Engineering and Finance pointed at one roadmap. I now automate the repetitive parts of that analysis with Claude AI agents at Applied Materials, so a new channel bet gets tested, measured and reported on faster than it used to.

I would welcome the chance to talk through how DoorDash sequences a channel portfolio from first test to always-on program. Proof trail at adhi-growth-ai.vercel.app/ref/doorDash.
